

Advanced Placement Comparative Government Unit I

:

Introduction to Comparative Government

- Thursday 8/17 **Introduction to AP Comparative Government.** Assign Textbooks and Readings; (if time allows), hand out Course **Outline and Unit 1** syllabus for Chapters 1 and supplements. Assign reading: Selection from *Is Anti-Intellectualism killing America?* **Roundtable to follow.** Work on thesis statements in article/defense.
- Friday 8/18 same as Thursday, if we have shortened periods. **Reminder: AP Pre-Test will be given on 8/21 and 8/22. 55 Multiple Choice and one Free-response question.**
- Monday 8/21 **AP Pre-Test – Multiple Choice Section 55 Questions.**
- Tuesday 8/22 **AP Pre-Test- Free Response Section- 1 Question** (The real AP Test will contain 8 Free Response and short answer questions in May)
- Wednesday 8/23 **AP Roundtable- Article introduced, discuss seminar format and Explanation of critical review guideline sheet (in unit packet)**
- Thursday 8/24 **Begin Unit 1 Reading in Kesselman Text: pp 2-4 Introduce Cornell Note-taking system. Video-TBA**
- Friday 8/25 **Read Kesselman 5-11 Practice Quiz on Monday. Video- TBA**
- Monday 8/28 **Quiz over Ch1. pp. 5-11**
Group activity: Writing an AP essay thesis (in unit packet) **Article provided**

Group activity: Writing an AP essay conclusion - packet) **Article provided.**

**Read 11-21 Kesselman Text
hope☺**

Video to finish! I

- Tuesday 8/29 Quiz 11-21 Kesselman. / Conceptual Resources in class.**
- Wednesday 8/30 Quiz 21-25 Kesselman Conceptual resources in class**
- Thursday 8/31 Conceptual resources in class.**
- Friday 9/1 Critical Review Due: What Democracy is and what it is not. Seminar Discussion. Read Wood 73-80 (in packet)**
- Monday 9/4 No School- Labor Day!**
- Tuesday 9/5 Quiz: Wood 73-80. Discuss AP Test topics- Essay Questions and Multiple choice test tips. Conceptual Resources (If time remains)**
- Wednesday 9/6 Finish conceptual resources.**
- Thursday 9/7 Testing: Kesselman and Wood. Ch.1 and Wood Text. Up to 55 Questions. 45 Minutes**
- Friday 9/8 AP Style Free Response Test – 2 questions covering text and/or readings/activities in class. 45 Minutes.**

CHAPTER 1

Introducing Comparative Politics

Summary Overview

Comparing is as natural a human activity as breathing or laughing. You need only recall your grade school days when you and others would compare what you each had for lunch in order to realize this. As students of comparative politics, that process continues, but rather than comparing lunch items, this endeavor involves comparing countries. We compare because it provides us with a better understanding of others and ourselves. That is both the focus and promise of your textbook.

This text facilitates the comparative process by organizing each chapter along four primary themes: historical development, the role of the state in economic management, the spread of democracy and the challenges of democratization, and the sources and political impact of diverse collective identities. Examining the past aids in understanding current conditions and highlights future trends, especially when examined through the prism of economic development, democratization, and group analysis. Particularly important moments in a country's history are called critical junctures. For example, the signing of the Magna Carta, the French Revolution, the end of the Cold War, and the terrorist attacks of 9/11 all had significant impacts on the shaping of institutions and on future outcomes.

Comparative politics is an academic subfield within the discipline of political science, but the name also describes the methodological approach used by comparativists. Ideally a comparativist would like to compare as much as possible, but time and space limits the choices to just a few items. A state's institutions represents the preferences of the dominant groups within society and lays bare how political power is distributed between the government and the society it seeks to manage. Thus, many within comparative politics choose to begin their examination with institutions, highlighting especially those instances where state boundaries and national identity do not coincide.

It is not enough simply to compare the unique features of each country or describe how those features developed. The goal of all scientists, political and otherwise, is to explain why the development occurred in the manner it did. A theory does just that. Political scientists use a variety of approaches in their study of political phenomena and behavior, including political culture and rational choice theories. These theories suggest causation, that is, an independent variable influences the outcome of the dependent variable. Political culture and rational choice are both considered middle-level theories in that they seek to explain phenomena in a limited range of cases rather than for all cases.

A quick examination of just one of the textbook's themes, the role of the state in economic management, serves to illustrate the challenges to developing theory. There are a variety of ways to organize the economy ranging from *laissez-faire* approaches to more involvement of the state. Comparativists would want to know which approach creates the best outcome. While most states have some form of a mixed economy, there appears no single formula for success, as states with very different forms of economic organization have been successful.

Implicit in the above example is the categorization of states into some sort of organizational scheme, called typologies. Typologies provide useful ways to classify different cases into a small number of clusters in order to facilitate comparison. For example, the text classifies regimes into three groups:

consolidated democracies, transitional democracies, and authoritarian regimes.

To facilitate your ability to compare, each chapter is structured similarly. Every chapter begins with a historical overview before proceeding to a discussion on economic development. Next is an examination of how the state makes policy and the pathways by which society can participate in that process. Each chapter ends with a return to the text's major themes, with a discussion of future challenges.

Chapter Outline

- I. The Global Challenge of Comparative Politics**
 - A. Making Sense of Turbulent Times
- II. What—and How—Comparative Politics Compares**
 - A. Level of Analysis
 - B. Causal Theories
- III. Themes for Comparative Analysis**
 - A. Theme 1: A Globalizing World of States
 - B. Theme 2: Governing the Economy
 - C. Theme 3: The Democratic Idea
 - D. Theme 4: The Politics of Collective Identities
- IV. Classifying Political Systems**
 - A. The Meaning—or Meanings—of Democracy
- V. Organization of the Text**
 - A. 1: The Making of the Modern State
 - B. 2: Political Economy and Development
 - C. 3: Governance and Policy-Making
 - D. 4: Representation and Participation
 - E. 5: Politics in Transition

Lecture Launchers

1. Explain the differences in the function and the geographic scope of the WTO, IMF and NAFTA.
2. Prepare a more in-depth lecture on the comparative method, addressing the following questions: Why compare? Why do comparativists rely more on comparison and less on other scientific methods? How do we compare? What are the problems that emerge in comparison?
3. During 2011, strong popular movements demanding democracy emerged across the Middle East and North Africa known as the “Arab Spring.” How likely is it that these countries will be able to establish democracy? What are the requisites of democracy?

Critical Thinking Questions

1. The textbook describes the significance of globalization in transforming relations among states, yet

Chapter 1: Introducing Comparative Politics

countries have always been interconnected. How are the new connections in the international system distinct from those in the past, and why are these distinctions significant?

2. The textbook outlines the minimal conditions for a country to be considered a democracy. How well does the United States fill the bill when it comes to these conditions?
3. In what ways are comparative politics and international relations the same? How do they differ? Why are these differences important?

In-Class Activities

1. Think about your own life and of any critical junctures that may have occurred. How did those critical junctures help shape your future? Share with the class only if you want to.
2. What are collective identities? Give some examples of collective identities in the United States. Do you belong to a collective identity? If more than one group, what challenges if any does that create for you?
3. At the end of the chapter is a list of Internet-based resources. Break the class into small groups, and within the groups, have students choose any two of the sites. Students should compare the site's information, how that information is presented, and the ease of navigation. Share your impressions with the group.

Comparing Countries

1. Which theory best explains Russian president Vladimir Putin's aggression against Ukraine in early 2014, rational choice or political culture? What are each theory's strengths and weaknesses? What other theories have you heard on the news? Can you think of your own theory to explain Putin's behavior? Does the fact that Putin once headed the KGB affect your choice of theory?
2. What are the differences between parliamentary and presidential regimes, and why is this difference significant to the performance of democratic regimes?
3. What are the different ways to measure development set out in the text? What are the relative merits and drawbacks of each in terms of how it captures the real quality of life in a country?

Key Terms

Authoritarian Regimes: A system of rule in which power depends not on popular legitimacy but on the coercive force of the political authorities.

Bureaucracy: An organization structured hierarchically, in which lower-level officials are charged with administering regulations codified in rules that specify impersonal, objective guidelines for making decisions.

Cabinet: The body of officials (e.g., ministers, secretaries) who direct executive departments presided over by the chief executive (e.g., prime minister, president).

Causal Theories: An influential approach in comparative politics that involves trying to explain why “if X happens, then Y is the result.”

Cold War: The hostile relations that prevailed between the United States and the Soviet Union from the late 1940s until the demise of the USSR in 1991.

Collective Identities: The groups with which people identify, including gender, class, race, region, and religion, and which are the “building blocks” for social and political action.

Communist Party–State: A type of nation-state in which the communist party attempts to exercise complete monopoly on political power and controls all important state institutions.

Comparative Politics: The field within political science that focuses on domestic politics and analyzes patterns of similarity and difference among countries.

Comparativist: A political scientist who studies the similarities and differences in the domestic politics of various countries.

Consolidated Democracies: Democratic political systems that have been solidly and stably established for an ample period of time and in which there is relatively consistent adherence to the core democratic principles.

Corruption Perceptions Index: A measure developed by Transparency International that ranks countries in terms of the degree to which corruption is perceived to exist among public officials and politicians.

Country: A territory defined by boundaries generally recognized in international law as constituting an independent country.

Critical Juncture: An important historical moment when political actors make critical choices, which shape institutions and future outcomes.

Democracy: From the Greek *demos* (the people) and *kratos* (rule). A political system featuring: selection to public offices through free and fair elections; the right of all adults to vote; political parties that are free to compete in elections; government that operates by fair and relatively open procedures; political rights and civil liberties; an independent judiciary (court system); and civilian control of the military.

Chapter 1: Introducing Comparative Politics

Democratic Transition: The process of a state moving from an authoritarian to a democratic political system.

Dependent Variable: The variable symbolized by Y in the statement that “If X happens, then Y will be the result”; in other words, the dependent variable is the outcome of X (the independent variable).

Dictatorships: A form of government in which power and political control are concentrated in one or a few rulers who have concentrated and nearly absolute power.

Distributional Politics: The use of power, particularly by the state, to allocate some kind of valued resource among competing groups.

Environmental Performance Index: A measure of how close countries come to meeting specific benchmarks for national pollution control and natural resource management.

Executive: The agencies of government that implement or execute policy.

Freedom in the World Rating: An annual evaluation by Freedom House of the state of freedom in countries around the world measured according to political rights and civil liberties.

Global Gender Gap: A measure of the extent to which women in 58 countries have achieved equality with men.

Globalization: The intensification of worldwide interconnectedness associated with the increased speed and magnitude of cross-border flows of trade, investment and finance, and processes of migration, cultural diffusion, and communication.

Gross Domestic Product (GDP): The value of the total goods and services produced by the country during a given year.

Gross National Product (GNP): GDP plus income earned abroad by the country’s residents.

Hegemony: The capacity to dominate the world of states and control the terms of trade and the alliance patterns in the global order.

Human Development Index (HDI): A composite number used by the United Nations to measure and compare levels of achievement in health, knowledge, and standard of living.

Independent Variable: The variable symbolized by X in the statement that “If X happens, then Y will be the result”; in other words, the independent variable is a cause of Y (the dependent variable).

Institutional Design: The institutional arrangements that define the relationships between executive, legislative, and judicial branches of government and between the national government and subnational units such as states in the United States.

International Monetary Fund (IMF): The International Monetary Fund is the global institution with a mandate to “foster global monetary cooperation, secure financial stability, facilitate international trade, promote high employment and sustainable economic growth, and reduce poverty.” It has been particularly active in helping countries that are experiencing serious financial problems. In exchange for IMF financial or technical assistance, a country must agree to a certain set of conditions that promote economic liberalization.

Judiciary: One of the primary political institutions in a country; responsible for the administration of justice and in some countries for determining the constitutionality of state decisions.

Legislature: One of the primary political institutions in a country, in which elected members are charged with responsibility for making laws and usually for authorizing expenditure of the financial resources for the state to carry out its functions.

Legitimacy: A belief by powerful groups and the broad citizenry that a state exercises rightful authority.

Middle-Level Theory: Seeks to explain phenomena in a limited range of cases, in particular, a specific set of countries with particular characteristics, such as parliamentary regimes, or a particular type of political institution (such as political parties) or activity (such as protest).

Mixed Systems: Countries whose political systems exhibit some democratic and some authoritarian elements.

Nation-State: A country in which the state and national identity coincide.

North American Free Trade Agreement (NAFTA): A treaty among the United States, Mexico, and Canada implemented on January 1, 1994, that largely eliminates trade barriers among the three nations. NAFTA serves as a model for an eventual Free Trade Area of the Americas zone that could include most nations in the Western Hemisphere.

Political Economy: The study of the interaction between the state and the economy, that is, how the state and political processes affect the economy and how the organization of the economy affects political processes.

Purchasing Power Parity (PPP): A method of calculating the value of a country’s currency based on the actual cost of buying goods and services in that country rather than how many U.S. dollars the currency is worth.

Rational Choice Theory: An approach to analyzing political decision making and behavior that assumes that individual actors rationally pursue their aims in an effort to achieve the most positive net result. The theory presupposes equilibrium and unitary actors. Rational choice is often associated with the pursuit of self-interested goals, but the theory permits a wide range of motivations, including altruism.

Chapter 1: Introducing Comparative Politics

Social Class: A group whose members share common worldviews and aspirations determined largely by occupation, income, and wealth.

Social Movements: Large-scale grassroots action that demands reforms of existing social practices and government policies.

Social Progress Index: A composite measurement of social progress in countries that takes into account basic needs, their food, shelter, and security; access to health care, education, and a healthy environment; and the opportunity for people to improve their lives.

State: The most powerful political institutions in a country, including the executive, legislative, and judicial branches of government, the police, and armed forces.

State Formation: The historical development of a state, often marked by major stages, key events, or turning points (critical junctures) that influence the contemporary character of the state.

Sustainable Development: An approach to promoting economic growth that seeks to minimize environmental degradation and depletion of natural resources.

Typology: A method of classifying by using criteria that divide a group of cases into smaller groups of cases whose members share common characteristics.

World Bank (officially the International Bank for Reconstruction and Development): The World Bank provides low-interest loans, no-interest credit, policy advice, and technical assistance to developing countries with the goal of reducing poverty. It is made up of more than 180 nations. All members have voting rights within the Bank, but these are weighted according to the size of each country's financial contribution to the organization.

World Trade Organization (WTO): A global international organization that oversees the "rules of trade" among its member states. The main functions of the WTO are to serve as a forum for its members to negotiate new agreements and resolve trade disputes. Its fundamental purpose is to lower or remove barriers to free trade.

Somali Piracy: A Nasty Problem, a Web of Responses

"In a surprising way, piracy provides an opportunity to harness the collective strength of states. . . ."

JAMES KRASKA AND BRIAN WILSON

On April 12, U.S. Navy Seals staged a dramatic rescue of an American cargo ship captain who had been held hostage during a five-day standoff in the Indian Ocean. The episode highlighted a problem that has drawn increasing international attention over the past year: piracy off the Somali coast. Approximately 125 ships carrying cargo that included oil, weapons, and chemicals were attacked in 2008. In the first two months of 2009, another 30 ships were attacked near Somalia.

To be sure, armed gangs demanding ransom have successfully boarded only a small fraction of the 33,000 vessels that annually ply the region's strategically important waters—waters that include the Gulf of Aden, the key gateway to trade between the East and West. Still, several seamen have been killed or injured, and the global merchant shipping supply chain has been adversely affected (for instance through increased insurance premiums). Some vessels, especially slower ships with low free-boards, have opted to avoid the area altogether.

In response to the crisis, an unprecedented combination of national commitment, naval force, and international action has emerged. Impressive diplomatic collaboration is unfolding in various venues, including the United Nations Security Council and the International Maritime Organization. Collectively, these developments represent a unity of effort that presages yet more partnering: utilization of the rule of law to address regional instability at sea; "out-of-area" employment of naval forces; and integration of international organizations to facilitate repression of maritime piracy. Capitalizing on this transformational synergy is key to effectively battling maritime crime throughout the world.

Fire Hoses and Razor Wire

The Somalia piracy problem has been simmering for years. The country has lacked a functioning government since the early 1990s. Adversity and hardship permeate the area. Somalia's security and political environment has long been volatile, in part

because of endemic poverty and an unemployment rate greater than 50 percent. These problems have been compounded by foreign poaching of Somali fisheries and a drought that has obliterated the country's agriculture.

Because piracy is a phenomenon that tends to surge when poverty, lack of economic growth, and crime are not addressed at the national and regional level, the result has been a proliferation of piracy in the Horn of Africa. Somali pirates are not terrorists pursuing a political cause—they are armed robbers at sea. As the leader of one pirate gang remarked, "What we need is money."

Toward that end, pirates successfully boarded more than 40 ships in 2008 and took nearly 900 seafarers and vessel passengers hostage. Currently, more than 120 people are being held prisoner in the vicinity of Harardhere, Somalia, the headquarters of most of the region's maritime piracy. The pirates last year secured from ship, cargo, and insurance companies \$150 million in ransom payments for crews and vessels.

Somali pirates are not terrorists pursuing a political cause. As the leader of one gang remarked, "What we need is money."

Last November, for example, Somali pirates seized the *Sirius Star*, a Saudi-owned supertanker with a cargo of crude oil valued at \$100 million. The 25-member crew was held hostage, the pirates demanded a ransom, and a two-month standoff ensued. Finally on January 9, 2009, a package said to contain \$3.2 million was photographed floating in a parachute down to the tanker. Later that day, five of the pirates drowned with their share of the ransom when their small boat capsized as they sped toward the Somali shore.

The situation has grown so dire that, after the seizure of the *Sirius Star*, the leading Norwegian shipping group Odfjell suspended transits through the area. And Danish shipper Maersk, one of the world's largest, is considering forgoing

the Suez Canal and routing ships around southern Africa in order to avoid piracy-prone Somalia. Such decisions increase the cost of shipping: The route around the Cape of Good Hope entails an additional 10 to 14 days of transit time.

Private industry naturally is engaged in the fight against piracy. Firms offer vessel security services for crew protection and have developed new technologies to repel boarders. Ships have ramped up their defensive capabilities by employing a variety of passive and nonlethal methods, which include ringing lifelines with razor concertina wire, employing evasive rudder handling tactics, and repelling boarders with fire hoses.

But more importantly, remarkable coordination has recently unfolded in the fight against piracy. This includes partnering among countries to expand communication, intelligence, legal capabilities, and maritime security. Over the past few years, a spontaneous and loosely linked armada of warships from China, Iran, Russia, Britain, France, India, the United States, and other countries has deployed to the Horn of Africa to protect sea lines of communication.

This coordinated effort already is producing results. In the first two months of 2009, while approximately 30 ships were attacked off the Somali coast, only 4 were boarded and hijacked—a significantly reduced success rate for the pirates. Internationally deployed warships have successfully disrupted piracy attacks in the region, destroyed pirate skiffs, and captured dozens of Somali pirates.

The campaign has been backed, moreover, by impressive diplomacy. In 2008 the UN Security Council adopted four resolutions to repress piracy. These resolutions are unprecedented in the scope and authority that they provide the international community to counter threats in the maritime domain. The resolutions prevent pirates from using the territorial waters of Somalia to avoid capture, increase the number of states deploying naval forces to the area, strengthen legal authorities' ability to prosecute pirates, and improve international cooperation, particularly with regard to the disposition of captured pirates. The resolutions, furthermore, are legally binding on all states.

In addition to making breakthroughs in multilateral diplomacy, nations are also working bilaterally and regionally. The United Kingdom and Kenya in late 2008 signed an agreement that enables Britain to transfer piracy suspects to Kenya for prosecution. The United States and Kenya finalized a similar accord in January 2009. Washington also was instrumental in establishing a UN "contact group" to help states in the region and international maritime powers better coordinate efforts.

These collaborative and innovative endeavors, which have required overcoming logistical, military, legal, and diplomatic challenges, will likely turn out to be the enduring legacy of the Somali piracy crisis. So, in a surprising way, piracy provides an opportunity to harness the collective strength of states in securing the maritime domain.

The Long Arm

As a matter of law, piracy is considered an illegal act of committed for private (rather than political) ends by the crew or passengers of a ship against another ship outside of a state's

territorial waters. Inside territorial waters, such crimes constitute "armed robbery at sea," and they are the responsibility of the coastal state. But if armed robbery at sea occurs just a few meters seaward from the 12-nautical mile limit of the territorial waters that all coastal states have, it may be considered "maritime piracy."

This definition of piracy is codified in the UN Convention on the Law of the Sea. Yet, despite the convention's detailed provisions regarding many matters, issues of legal jurisdiction at sea are a complex affair, and this complicates international efforts to combat piracy. For example, the convention assigns primary jurisdiction for law enforcement at sea to the flag state—a vessel's nation of registry—and lays out specific circumstances under which a vessel suspected of piracy may be boarded. Yet, because the seas are a combination of flag, port, and coastal-state juridical authorities, determining which state will assume jurisdiction is not always clear.

Moreover, criminal offenses on the oceans frequently involve suspects, victims, and witnesses who are nationals of various countries. Ensuring criminal accountability is further complicated if a state does not have domestic criminal codes proscribing the conduct in question, because that state will most likely not have jurisdiction to initiate a prosecution, nor have an interest in detaining the suspects. What all this means is that international cooperation is particularly vital with regard to piracy—no single nation in any case has the naval capability to patrol the vast areas affected by these maritime crimes.

The definition of piracy codified in the Law of the Sea developed from centuries of customary international law, but in recent years other definitions of piracy have emerged that cover armed robbery at sea and other maritime crimes such as murder at sea. So far, such supplementary definitions are mainly used for shipping industry statistics. Still, it has been suggested that the political and legal focus on protecting ocean shipping would be sharpened if piracy were combined with marine cargo theft, maritime drug smuggling and human trafficking, and maritime terrorism under the single category of maritime crime.

No single nation has the naval capability to patrol the vast areas affected by maritime crimes.

Historically, piracy has been considered a subset of violent maritime predation that is not part of a widely recognized or declared war. In the West, maritime piracy was a feature of life in the Mediterranean from the ancient world to the age of steam. Throughout two millennia the threat of piracy was brought under control only by powerful navies, such as the imperial Roman fleet during the reign of Augustus Caesar. With the rise of nation states, piracy was kept in check by powerful Dutch and English fleets composed of fast sailing ships and, eventually, steam-powered vessels. During the cold war, large and active superpower navies, making routine port visits throughout the world, helped to contain piracy.

No Eye Patches, Many Vessels

Since the end of the cold war, however, problems of failed states and ungoverned areas, of weak governments and tribalism—problems that affect stability and prosperity on land—have also promoted piracy at sea. After an upswing in piracy in the Straits of Malacca and Singapore earlier this decade, the littoral states of Indonesia, Malaysia, and Singapore began cooperating closely to suppress piracy. Their efforts have led to a dramatic reduction in the number of piracy attacks in Southeast Asia. Yet, just as piracy in Asia was declining, regional instability and a declining naval presence in the Horn of Africa fueled a rapid increase in piracy off the coast of Somalia.

Today warships from various countries are on station in the Horn of Africa conducting piracy repression missions. But this arena is a vast swath of water, as long as the U.S. Atlantic seaboard—the operating area comprises more than 2 million square miles. Preventing an attack in an area this big is made even more difficult when the criminals plying the waters disguise their purpose by appearing to engage in legitimate activities, such as fishing. As chief NATO spokesman James Appathurai has said, pirates do not typically identify themselves “with eye patches and hook hands,” so it is not immediately obvious that they are pirates. And in some instances, pirates feign distress at sea, attracting mariners who are bound by international law to render assistance.

Further compounding the piracy problem is a lack of capacity within Somalia and neighboring states to patrol the regional seas. Indeed, pirates routinely seize ships or hostages in international waters and then flee into Somalia’s territorial waters to avoid capture. As a result, even with the large number of warships currently deployed to the area, maritime piracy continues to be a daily occurrence off the coast of East Africa.

Still, the international naval presence in the region has prevented maritime security from deteriorating even further. For example, a current European Union mission against piracy off the coast of East Africa, Operation Atalanta, represents the EU’s first deployment as a maritime security force. The undertaking has benefited shipping immediately: A German frigate thwarted an attack on an Egyptian ship in December 2008. In January 2009, EU naval forces successfully intervened to stop hijackings of the Panamanian-flagged *S. Venus* and the Greek-flagged tanker *Kriti Episkopi*. A French warship, a Corvette-class naval patrol vessel, responded to the *S. Venus* and captured eight pirates, who were turned over to Somali authorities for prosecution.

A cooperative naval operation known as Combined Task Force 150 (CTF 150) is also at work in the region conducting operations against piracy. Membership in CTF 150 has varied, with warships being provided by Pakistan, Britain, Canada, France, and Germany, among others. In 2008, CTF 150 operations thwarted more than two dozen pirate attacks.

In January 2009, the U.S. Fifth Fleet created a task force dedicated solely to confronting maritime piracy—Combined Task Force 151 (CTF 151). The new task force was created because some navies in CTF 150 were operating under counterterrorism authority, and did not have the authority to conduct counter-piracy missions within that framework. CTF 151 accommodates such legal concerns by establishing a staff that is focused on maritime constabulary issues such as maritime

piracy, drug smuggling, and weapons trafficking. Australia is considering sending a warship to CTF 151; Turkey, Denmark, and the United Kingdom have already done so. The U.S. Navy has contributed approximately 1,000 sailors, along with surface warship and naval aviation assets, to CTF 151.

The infusion of naval assets has materially altered the operational landscape. However, given that attacks are still occurring with disturbing frequency, albeit with a reduced success rate, a maritime presence alone is not a long-term solution. Furthermore, it is unlikely that many of the nations that have sent naval forces to the region can sustain their deployments indefinitely. Perhaps additional means of addressing the problem may be borrowed from diplomatic precedents in regions outside the Horn of Africa.

Strength in Numbers

In Southeast Asia and West Africa, in particular, states have invested considerable effort in securing sea lines of communication, protecting navigational freedoms, and reducing both crime and regional instability. This international focus has been elevated in recent years—but some such initiatives have existed for decades.

In Southeast Asia, approximately 50,000 ships annually transit the Malacca straits, carrying one-third of the globe’s trade. Pirates in the area sometimes wear military uniforms to imitate legitimate maritime security forces. After they strip fishing of their equipment, typically pirates demand “protection money” that varies from \$3,000 to more than \$12,000. These criminal acts are occurring in one of the world’s busiest waterways, making effective patrolling especially challenging.

Yet piracy in the area has declined significantly over the past five years because of decisive state action, collaboration, and multiple regional initiatives. In 2004 Asia produced a “Regional Agreement on Combating Piracy and Armed Robbery Against Ships in Asia,” or ReCAAP, the first treaty dedicated solely to combating piracy. This Japan-led accord has 16 state parties and operates a state-of-the-art information sharing center in Singapore that fuses and disseminates among member states time-critical piracy-related information.

One year after the introduction of ReCAAP, more than 30 nations and international and nongovernmental organizations met in Jakarta, Indonesia, to develop a framework to improve maritime safety, security, and environmental protection in the Straits of Malacca and Singapore. The discussions continued in Kuala Lumpur in 2006 and Singapore in 2007. The meetings resulted in adoption of a “Cooperative Mechanism” that is proving effective at increasing the number of maritime patrols by the straits states, and in attracting donors from outside the littoral region to build maritime security capacity in Indonesia, Singapore, and Malaysia. The Cooperative Mechanism is an example of unprecedented partnering among littoral states to provide for the safety and security of an international strait.

In 2008, at the Asia-Pacific Economic Cooperation forum, Malaysia’s foreign affairs minister called on members of that body to confront piracy more aggressively. The Royal Malaysian Navy is expected to place a greater emphasis on maritime security in the straits, and Indonesia has enhanced its maritime ship patrols and airborne surveillance. Such a focus could

Article 2. Somali Piracy: A Nasty Problem, a Web of Responses

prove beneficial for counter-piracy efforts in the straits in 2009, as piracy may intensify because of the global economic crisis.

Africa has its own substantial history of multilateral anti-piracy efforts. In 1975 the Maritime Organization of West and Central Africa (MOWCA) was formed—though only recently has the organization realized its potential to create a regional maritime security network. Headquartered in Abidjan, Ivory Coast, MOWCA exercises an influential role in port security and shipping coordination. The forum supports member states in cooperatively managing all maritime issues—vessel security and littoral security, maritime constabulary functions, safety of navigation, and environmental protection. Several programs have been launched under the network to enhance collaboration in the international shipping transport sector, including an effort to establish a regional coast guard network. Of the 25 MOWCA states, five are landlocked, a fact that underscores the widespread support for regional maritime stability.

In the Red Sea area, cooperation is not nearly as developed or structured as in the regions covered by MOWCA and ReCAAP. Nevertheless, associations are emerging that, although they are relatively informal, could prove a vitally important component in piracy repression and regional stability. Red Sea states are of course affected by piracy near Somalia, in the Gulf of Aden. The problem is particularly pernicious for Egypt, since the Suez Canal generates more than 1 percent of Egypt's gross domestic product and some vessels are already avoiding it because of the threat in the neighboring Gulf.

In November 2008, Egypt hosted a meeting in Cairo for the Red Sea states to discuss the problem of maritime piracy. Representatives from Yemen, Jordan, Saudi Arabia, and Sudan, as well as Somalia, participated in the closed-door sessions. During a later UN Security Council debate, Egypt's representative discussed the deliberations at the Cairo meeting. He noted that there had been no recent pirate attacks in the Red Sea because of the capacity of coastal countries to secure their shores—and because of coordination among the Arab countries bordering the Red Sea.

Multilateral efforts are crucial for combating piracy off the Somali coast, but bilateral efforts are important as well. A 2006 agreement between India and the United States might underpin one such bilateral effort—but the agreement has been underutilized. Washington and Delhi developed the pact to promote maritime security cooperation and coordination. The accord calls for the two states to conduct bilateral maritime exercises, cooperate in search and rescue operations at sea, exchange information, and enhance cooperative capabilities.

In October 2008, 8,500 naval personnel from India and the United States participated in "Malabar," a week-long naval exercise in the Arabian Gulf. The exercise was designed to help both countries' naval forces better understand the tactics, techniques, and procedures employed by the other force, thereby promoting interoperability. The Indian navy chief of staff credited such confidence-building partnership activities between the United States and India with improving coordination and making naval forces more effective in fighting piracy off the Somali coast.

This sentiment takes on added significance when one considers the Indian navy's prominent role in Gulf of Aden repression operations—Indian warships escort many vessels through the Gulf of Aden and have thwarted several piracy attacks.

Unfortunately, years after the presidential-level maritime accord was reached between India and the United States, the agreement has not yet been fully implemented. The two nations still have to define and structure protocols for staff-level meetings and informal discussions, as well as increase training, exchanges, and combined maritime exercises.

Dispose of Properly

Another area in which greater international cooperation is needed is "disposition," or the component of piracy repression efforts that deals with investigation, trial, and punishment. Disposition poses enormous legal and political challenges for the states involved. The U.S. and UK prosecution agreements with Kenya are exactly the sort of thing that is required to ensure that pirates are held accountable. Previously, maritime powers such as Denmark and France had in several instances released captured pirates because of the evidentiary and logistical difficulties in conducting trials originating in the Horn of Africa.

Kenya has been a regional leader for disposition and legal action, having prosecuted pirates in 2006 after a U.S. ship disrupted a vessel hijacking. Kenya has since held piracy trials, with trial judges denying defense motions to dismiss on jurisdictional grounds.

In the short term, it is critical to ensure that those caught hijacking a vessel be brought to criminal trial. But to meaningfully reduce piracy in the long term, the crushing, sustained poverty and lack of governance in Somalia must be addressed. In the meantime, as piracy continues off the Somali coast, effectively repressing this threat to national security interests, shipping, and global commerce requires collaboration. We have seen how, in Asia, ReCAAP has had a remarkable impact in reducing piracy. In West Africa, MOWCA has been reenergized and is now a force for regional stability. Also in West Africa, a pioneering new coast guard network is promising.

What this tells us is that—although warships, UN Security Council resolutions, and legal authority are all part of the solution to piracy—any political commitment to repressing piracy and safeguarding a region's waters must, for lasting effectiveness, emanate from coastal and affected states.

Critical Thinking

1. Why are Somali's politics and government a problem?
2. What are the ways to combat piracy?
3. Why does combating piracy require collaboration between nations?

Corruption You Can Count On

Crooked Governments Don't Inevitably Kill an Economy; Trouble Emerges When the Rules of the Game Are Unpredictable.

RAYMOND FISMAN

In 1967, a young army general named Suharto became president of Indonesia, and ruled for the next three decades with an iron fist. He presided over a notoriously corrupt bureaucracy that enriched Suharto's friends and family. His wife was commonly known as Madame Ten Percent, playing off her name of Ibu Tien, and an indication of her demands from profitable businesses. Yet in the midst of this endemic corruption, the country thrived economically.

China took its turn in the corruption spotlight recently with admissions of bribe-taking by Rio Tinto executives on trial in Shanghai. It was the second time in a week that corruption in China made headlines, along with Daimler's admission of paying bribes to officials in 22 countries—China included—to secure government contracts. It would seem that corruption in China, one of the fastest growing countries on the planet, is alive and well—providing another counterexample to conventional wisdom that corruption kills economic development.

Many countries that populate the lower rungs of Transparency International's annual corruption perception rankings—Myanmar, Zimbabwe, Haiti, to name a few—are dismal economic failures. But to the discomfort of development economists and anti-corruption crusaders, some of the great economic success stories of the past half-century have taken place in the most corrupt economies on earth. In Transparency's first corruption ranking in 1995, the two countries that ranked as the most corrupt were Indonesia and China. Yet these ratings came amid decades-long economic booms. Indonesia grew at 6% per year under Suharto, and since the death of Mao Zedong in 1976, the Chinese economy has grown at 9% annually, a rate unprecedented in modern history.

As far as economic development is concerned, apparently not all corruption is created equal. Volatile, unpredictable and uncoordinated corruption is what has proven to be most damaging to investment and growth. And China, if the Rio Tinto affair is any indication, could be entering a new era of uncertain corruption.

To understand why some corruption is so much more destructive than others, you first need to understand why countries grow, and how different types of corruption affect the underlying causes of development.

By and large, countries become rich because they save and invest, leading to higher productivity and output in future years. Investors look for low risk and high returns, and corruption can affect an investment's prospects through each of these channels. Most obviously, the excessively grasping hands of some dictators—the Robert Mugabes of the world—demand too large a cut from would-be investors. Imagine what would happen to investment if profits were taxed at 100% (or more) and you have some idea of the situation faced by Zimbabwe's businessmen.

Why do some leaders steal from the till in a measured way while others empty the cash register daily? It's the difference between stationary and roving bandits, as distinguished by the economist Mancur Olson. Thieving dictators who expect to be around year after year won't follow a scorched-earth approach to ruling their subjects, since they want to be sure that there's a crop next season from which to extract their tribute. By contrast, a precariously positioned dictator who fears that tomorrow he may find himself in exile or with his head in the guillotine will take what he can. So if we're stuck with corrupt dictators, we can at least hope for stable, forward-looking ones like Suharto.

A good, solid dictator also helps to ensure that rogue bureaucrats in individual ministries aren't charging businesses too much for permits and contracts. Consider the situation faced by a company that needs to interact with many government agencies (environmental, labor and so forth) to conduct its business. Under a dictatorship, the central government can dictate to ministries and officials what their individual takes will be. In effect, the president dictates a single bribe price, which is then distributed among lower-level officials.

How should a dictator set the amount to extract from each company? A higher bribe brings in more cash, but also risks driving the whole scheme out of business—at some point the extortion payment gets so high that companies may simply pack up and move elsewhere. If a dictator is doing things right, he'll pick an intermediate price that doesn't scare off too many investors.

Suharto resigned from office amid public protests and rioting in 1998, leaving behind a weak and fractured government. Suharto denied that his family ever profited from government dealings.

With no one to coordinate the bribe-taking of bureaucrats after a dictator leaves, an environment official may still show up to demand payment. But if he's freed up to pick his own price, he too will think about the trade-off between a higher bribe and the loss of income if a company leaves or goes out of business. What he fails to consider, however, is that if he sets his price too high he'll also be taking away some of the labor official's business when he stops by for his tribute. In fact, by not raising his rates after a dictator's grip is loosened, he may think he's a chump for leaving more money on the table for others. A labor official goes through the same exercise, and as a result the uncoordinated shakedown ends up killing off more business relative to earlier days.

This insight on the evils of decentralized corruption was first made by Andrei Shleifer and Robert Vishny, who noted that after the fall of the Soviet Union, the Russian bureaucracy splintered into an assortment of bureaucracies. Starting a business required bribing the local legislature, the central ministry, the local executive branch, the fire authorities, the water authorities and myriad others, none of whom seemed to communicate with one another.

If the lack of predictability of an unstable regime pushes leaders to steal more, it also makes businesses invest less. If your partner in crime has a tenuous hold on power, who knows whom you'll be dealing with tomorrow? And why should leaders honor the corrupt agreements of their predecessors? Similarly, a fresh set of faces generates uncertainty over how these new officials—with no track record or reputation for honoring deals—will keep their ends of the bargain after bribes are paid.

The dangers of disorganized corruption can be seen in the chaos that ensued with the end of Suharto's rule in 1998. One glimpse into the challenges faced by companies in the new Indonesia comes from a court case settled by Monsanto in 2005 in which it was accused of paying bribes to a government official in 2005. The company made its \$50,000 payoff in an attempt to buy the repeal of profit-reducing regulation, in clear violation of the Foreign Corrupt Practices Act that prohibits U.S. companies from paying bribes abroad. At the time of the settlement, Monsanto's then General Counsel Charles W. Burson said the company "accepts full responsibility for these improper activities." The government official denied taking any bribes. U.S. investigators also discovered that the unfavorable decree was never revoked.

Even the bribe amount may remain clouded in ambiguity. This lack of clarity over the required tribute is to some extent what distinguishes bribery from taxation. Taxes are at least in theory codified in law. In some countries, bribe payments are similarly codified through social norms and whisper networks: a Moscow magazine, for example, published the going rates for everything from buying a court verdict (\$50,000 to \$100,000) to instigating a police raid (\$100,000) in 2008. In others, however, the requisite payment remains ambiguous, with grasping politicians

or bureaucrats trying to squeeze as much out of each individual business as possible.

In addition to reducing the overall level of business activity, uncertain corruption will also shift the type of investments that entrepreneurs make toward those that generate a quick buck rather than a long-term payoff—paying bribes to an unstable or unpredictable government requires both a leap of faith and a quick exit strategy. This may account at least in part for the floating power barges, ready to be towed off at a moment's notice, supplying power to cities in Nigeria, Pakistan and elsewhere in the developing world. The alternative is breaking ground on an immovable land-based power plant that leaves investors vulnerable to escalating demands from local officials.

Uncertainty may also shift the projects favored by leaders themselves. Forward-looking stationary bandits may choose to throw their support behind investors who build infrastructure that will help the country grow and thrive (and hence create further opportunities for bribe-taking). Roving ones will instead sell off rights to chop down forests or strip-mine mineral resources. In 19th-century America, for example, the robber barons—for all their financial shenanigans—at least left the country with a nationwide railroad network. This stands in tragic contrast to the systematic destruction of Haiti's economic resources that took place under Jean-Claude "Baby Doc" Duvalier, who sold off the rail link from Port-au-Prince to Verrettes to an investment consortium that carefully packed up the tracks and shipped them out of the country.

Probably none of this should change our overall stance on reducing corruption. Some have argued that corruption can actually be better than no corruption at all, since it greases the wheels of commerce in economies otherwise paralyzed by bureaucracy. Yet few highly corrupt countries have had the economic successes of Indonesia, China or 19th-century America, and perhaps these countries would have grown even faster if unburdened by corruption. And this view ignores the matter of where all those regulations come from—probably corrupt bureaucrats who have figured out that the best way of extracting tributes is by tacking on more burdensome regulations.

But it does muddy the waters on what we have to say about the benefits of rooting out corruption, given that we may not like what replaces it. Investment and growth suffer most from erratic corruption practiced by weak and fractured governments. Yet regime change and reform naturally carry with them the upheaval and turmoil that at least in the short run may result in this less-desirable form of corruption. Even if corruption declines, what is left may be more pernicious. Businesses shouldn't pay bribes and government officials shouldn't take them, but we need to be careful in tinkering with economies where corruption is organized and its impact limited—we never know what may appear in its place.

This brings us back to China's secretive handling of the Rio Tinto case. Perhaps the most troubling aspect may be the signal it sends to foreign investors that they are entering a new era of uncertainty over the rules that govern their interactions with Chinese bureaucrats. It may be that Rio Tinto executives crossed

ANNUAL EDITIONS

an invisible trip wire that protects domestic Chinese interests. If market participants understand this, then the long-term impact on investment may not be so great: Those that break the rules in a well-enforced and predictable system should be punished.

But this line may not always be visible to the foreign investors whose dollars and expertise have helped to fuel China's explosive growth. The only thing more dangerous to investors than a corrupt market is one in which the rules of corruption are unclear. If Chinese leaders wish to keep the dollars coming in, they might do well to stamp out the corruption and bribery that keeps some investors away. But, failing that, they should at least make sure that greedy bureaucrats take their share in an orderly and predictable manner.

Critical Thinking

1. Describe the types of corruption in this article and the previous article.
2. What are the problems of corruption?
3. Should we try to eradicate corruption? What are the advantages of eradicating corruption?
4. Are there disadvantages to eradicating corruption? Give an example to illustrate.

Another attack in France

Madness and terror

NICE

When a truck is a weapon of mass murder

THE spots where the bodies fell are now marked by makeshift memorials along the palm-fringed beachfront. Some are ringed by pebbles. Most feature candles, stems of white flowers and teddy bears. Ten children were among the 84 killed on July 14th, when a 31-year-old Tunisian citizen ploughed a 19-tonne truck into Bastille Day crowds. A football lies among the mementos left where a 13-year-old French boy, Mehdi, was killed. His aunt died a step away. "I just hope this won't be turned against us," says a grieving family member, whose origins are in Morocco. "We grew up in France; we come from here too."

This was the third mass terrorist attack in 18 months, and the bloodiest on French soil since the Paris attacks last November. The proudest emblems of French life have been targeted: freedom of expression (*Charlie Hebdo*) and religion (a Jewish supermarket), as well as the security forces, in January 2015; sport, music and pavement cafés, in November 2015. Now, terror has struck seaside festivities for the country's national day at one of its most famous resorts, favoured by Hemingway and Fitzgerald, and painted by Matisse and Dufy.

Mohamed Lahouaiej Bouhlel, a delivery-driver born in Tunisia but living in Nice, drove his rented lorry for 1.7 kilometres (1.1 miles) over a promenade closed off for the city's annual fireworks display, where some 30,000 spectators had gath-

ered. He rammed the vehicle into the crowds, driving on and off the walkway used daily by joggers and cyclists, crushing bodies as he went. The carnage stopped only after he was shot dead by the police. A third of the dead were Muslims.

President François Hollande immediately called the attack "terrorist" in nature. Mr Lahouaiej Bouhlel's rampage, though, is a reminder of how the definition of Islamist terror has evolved. He showed a "certain interest" in radical Islamist movements, said François Molins, the Paris public prosecutor, and videos of decapitation were found on his computer. Islamic State (IS) claimed he was one of its "soldiers". But Mr Lahouaiej Bouhlel also ate pork, did not go to the mosque, and had an "unbridled sex life", said Mr Molins. No direct evidence of his allegiance to IS has yet been found.

Those who study radicalisation in France say that this profile is not uncommon. Deep religiosity rarely plays a part in the swing towards political *jihād*. Nor does IS need to issue direct orders. It "inspires this terrorist spirit", said Jean-Yves Le Drian, the defence minister. In 2014 Abou Mohammed Al-Adnani, an IS spokesman, urged *jihādists* not to worry if they could not blow themselves up or shoot a gun: smash the skull of a "French or American infidel" with a stone, stab him with a knife, or "run him over with a car".

It is not unusual for radicalisation to take place quickly, particularly among the violent or unstable. A loner, unknown to intelligence services, Mr Lahouaiej Bouhlel was given a suspended prison sentence earlier this year for violence. He grew a "religious" beard just eight days before the attack, said Mr Molins. "This is not an anomaly," says Hugo Micheron, a researcher on French *jihādists*. "There are different routes into *jihādism* today, and I've seen several cases of radicalisation taking place within a couple of weeks."

Nice may be best known as a swish tourist destination. But behind the old town's Belle-Epoque façade, the high-rise neighbourhoods that spread up the ravines beyond the city have become one of the most intractable centres of Islamist radicalism outside the Paris region. At least 55 residents of Nice and other towns in the department of Alpes-Maritimes, which covers the Côte d'Azur, have left for *jihād* in Syria or Iraq, including 11 members of one family. In part this is the work of a vigorous local French recruiter, known as Omar Omsen, or Omar Diaby. He was thought to have been killed in Syria last year, but seems to have faked his own death.

Côte de jihād

A local early-warning unit set up by Alpes-Maritimes in 2014 to counter radicalisation has so far received 600 alerts. Fully 37 individuals from the department have been expelled from France, and 15 others prevented from leaving the country. Five underground prayer houses suspected of preaching violent Islamism have been closed down. Moderate Muslim leaders fear that the latest attack will deepen distrust. A striking 36% of Nice voters backed the far-right National Front at the most recent elections. "The Muslim community is ▶▶

doubly attacked," says Boubekeur Bekri, rector of the Al-Forqane mosque, which lies near the brutalist tower blocks of Ariane, a *banlieue* of Nice: "By Daesh [is]—and by those who are playing Daesh's game by dividing Muslims."

The Nice attacks are sorely testing France's ability to withstand a permanent terrorist threat. Manuel Valls, the prime minister, has told the French to "live with terrorism". Mr Hollande announced fresh air strikes on Syria. Parliament has voted to extend the state of emergency, conceived last November as a temporary response, for a further six months. Yet such measures may be more about managing public anxiety than fighting terrorism. Hours before the Nice attack, Mr Hollande had announced that he would not renew the state of emergency. Of nearly 3,600 house raids carried out under its provisions, only five have led to a terrorism-linked judicial investigation.

Last year, the French reacted to terror mostly with defiance and unity. In Novem-

ber parliamentarians of all political colours spontaneously sang the national anthem after Mr Hollande's speech announcing a "war on jihadist terrorism". Today, however, there is increasing French anger at the failure of their government to keep people safe. After a minute's silence this week, Mr Valls was booed by crowds in Nice. Only 33% told a poll they have confidence in the government's counter-terrorism strategy.

Opposition politicians on the centre-right have turned on the government too. "If all measures had been taken, this drama would not have happened," claimed Alain Juppé, a former prime minister and presidential hopeful for the 2017 election. Arguably there could be more robust blockades around crowded public events, Israeli-style. But France is already on maximum alert, and has stretched its armed forces by putting 10,000 soldiers on patrol on the streets. The cruel reality is that if terrorists can turn lorries into weapons, it is impossible to keep everyone safe. ■

The evidence leaves no doubt. Investigators found signs of tampering on preserved samples from Russian athletes in Sochi. One man accredited as a "sewer engineer" at the Sochi games turned out to be a Russian intelligence officer, Evgeny Blokhin, who helped Mr Rodchenkov swap out the samples. In e-mails, Russian sports officials referred to Mr Rodchenkov's cocktail by the nickname "the Duchess". The report refutes Russian claims that doping was the fault of a few bad apples. Senior Russian sports officials, including a deputy minister and an anti-doping adviser, played key roles in managing the cover-up, dictating which athletes should be protected.

The International Olympic Committee (IOC) called the Russian programme a "shocking and unprecedented attack on the integrity of sport". Russia's track and field federation has already been banned from the Olympic Games in Rio de Janeiro, due to start on August 5th. As *The Economist* went to press, the IOC was meeting to decide whether to bar the rest of the Russian team too. The committee said it would balance the need to punish Russia against the right to compete of individual athletes who might not have used drugs.

Hoping to salvage his country's chances, Vladimir Putin promised to suspend the officials named in the report. Yet rather than apologising, he called the allegations part of an American-led conspiracy to "make sport an instrument for geopolitical pressure". And he promised to stand by his embattled minister of sport, Vitaly Mutko, a longtime ally stretching back to their days together in St Petersburg's city hall. The Olympic movement, he warned, "could find itself on the brink of division". If so, it is hard to imagine who will side with a country that drugged its athletes and lied about it. Unlike bottles of tainted urine, this scandal cannot be made to disappear. ■

Russia's Olympian drug habit

Tamper proof

MOSCOW

An investigation gives Moscow a gold medal for cheating

WHEN Grigory Rodchenkov, the erstwhile director of Russia's anti-doping lab, confessed that he had helped run a state-directed doping programme during the 2014 Sochi Winter Olympics, his story sounded fanciful. He said he had served athletes steroid-spiked cocktails mixed with cognac and vermouth, while Russia's secret police, the Federal Security Service (FSB), had cracked the supposedly fool-proof urine-sample bottles used in international competition. The sports ministry, Mr Rodchenkov claimed, fed lab officials lists of athletes to be protected; their drug-laced samples were swapped for clean ones through a hole in the wall of the Sochi testing facility.

The World Anti-Doping Agency (WADA) dispatched a team to investigate. This week, the results came back positive: Mr Rodchenkov's story was true. The report, the latest in a string of WADA investigations of Russian sport, details a co-ordinated government-run doping effort. Since 2011 the Moscow anti-doping laboratory, in concert with the sports ministry, had used a technique called "the disappearing positive" to cover up for dirty athletes; the FSB helped cook up a more sophisticated sample-swapping plan for the Sochi games. The cheating touched at least 30 sports, tainting Russia's triumphant haul of 33

medals in Sochi and calling into question the results of the 2013 track and field World Championships and the 2013 World University Games, both held in Russia. Richard McLaren, a Canadian lawyer who led the inquiry, says his initial scepticism of Mr Rodchenkov's claims proved unwarranted: "Now I know it did happen."

Britain's EU referendum

Divided we fall

A vote to leave the European Union would diminish both Britain and Europe

Jun 18th 2016 | From the print edition

THE peevishness of the campaigning has obscured the importance of what is at stake. A vote to quit the European Union on June 23rd, which polls say is a growing possibility, would do grave and lasting harm to the politics and economy of Britain. The loss of one of the EU's biggest members would gouge a deep wound in the rest of Europe. And, with the likes of Donald Trump and Marine Le Pen fuelling economic nationalism and xenophobia, it would mark a defeat for the liberal order that has underpinned the West's prosperity.

That, clearly, is not the argument of the voices calling to leave. As with Eurosceptics across the EU, their story is about liberation and history. Quitting the sclerotic, undemocratic EU, the Brexiteers say, would set Britain free to reclaim its sovereign destiny as an outward-looking power. Many of these people claim the mantle of liberalism—the creed that this newspaper has long championed. They sign

up to the argument that free trade leads to prosperity. They make the right noises about small government and red tape. They say that their rejection of unlimited EU migration stems not from xenophobia so much as a desire to pick people with the most to offer.

Singapore on steroids

The liberal Leavers are peddling an illusion. On contact with the reality of Brexit, their plans will fall apart. If Britain leaves the EU, it is likely to end up poorer, less open and less innovative. Far from reclaiming its global outlook, it will become less influential and more parochial. And without Britain, all of Europe would be worse off.

Start with the economy. Even those voting Leave accept that there will be short-term damage (see article (<http://www.economist.com/news/briefing/21700692-aftermath-vote-leave-european-union-will-depend-unpredictable-responses>)). More important, Britain is unlikely to thrive in the longer run either. Almost half of its exports go to Europe. Access to the single market is vital for the City and to attract foreign direct investment. Yet to maintain that access, Britain will have to observe EU regulations, contribute to the budget and accept the free movement of people—the very things that Leave says it must avoid. To pretend otherwise is to mislead.

Those who advocate leaving make much of the chance to trade more easily with the rest of the world. That, too, is uncertain. Europe has dozens of trade pacts that Britain would need to replace. It would be a smaller, weaker negotiating partner. The timetable would not be under its control, and the slow, grinding history of trade liberalisation shows that mercantilists tend to have the upper hand.

Nor is unshackling Britain from the EU likely to release a spate of liberal reforms at home. As the campaign has run its course, the Brexit side has stoked voters' prejudices and pandered to a Little England mentality (see article (<http://www.economist.com/news/britain/21700697-parochial-and-vacuous-britains-dismal-referendum-campaign-has-been-populists-dream-nigel>)). Despite Leave's free-market rhetoric, when a loss-making steelworks at Port Talbot in Wales was in danger of closing, Brexiteers clamoured for state aid and tariff protection that even the supposedly protectionist EU would never allow.

The pandering has been still more shameless over immigration. Leave has warned that millions of Turks are about to invade Britain, which is blatantly false. It has blamed strains on public services like health care and education on immigration, when immigrants, who are net contributors to the exchequer, help Britain foot the bill. It suggests that Britain cannot keep out murderers, rapists and terrorists when, in fact, it can.

Britons like to think of themselves as bracingly free-market. They are quick to blame their woes on red tape from Brussels. In reality, though, they are as addicted to regulation as anyone else. Many of the biggest obstacles to growth—too few new houses, poor infrastructure and a skills gap—stem from British-made regulations. In six years of government, the Tories have failed to dismantle them. Leaving the EU would not make it any easier.

How to make friends and irritate people

All this should lead to victory for Remain. Indeed, economists, businesspeople and statesmen from around the world have queued up to warn Britain that leaving would be a mistake (though Mr Trump is a fan). Yet in the post-truth politics that is rocking Western democracies, illusions are more alluring than authority.

Thus the Leave campaign scorns the almost universally gloomy economic forecasts of Britain's prospects outside the EU as the work of "experts" (as if knowledge was a hindrance to understanding). And it dismisses the Remain camp for representing the elite (as if Boris Johnson, its figurehead and an Oxford-educated old Etonian, personified the common man).

The most corrosive of these illusions is that the EU is run by unaccountable bureaucrats who trample on Britain's sovereignty as they plot a superstate. As our essay explains, the EU is too often seen through the prism of a short period of intense integration in the 1980s—which laid down plans for, among other things, the single market and the euro. In reality, Brussels is dominated by governments who guard their power jealously. Making them more accountable is an argument about democracy, not sovereignty. The answer is not to storm out but to stay and work to create the Europe that Britain wants.

Some Britons despair of their country's ability to affect what happens in Brussels. Yet Britain has played a decisive role in Europe—ask the French, who spent the 1960s keeping it out of the club. Competition policy, the single market and enlargement to the east were all championed by Britain, and are profoundly in its interests. So long as Britain does not run away and hide, it has every reason to think that it will continue to have a powerful influence, even over the vexed subject of immigration.

True, David Cameron, the prime minister, failed to win deep reform of Britain's relations with the EU before the referendum. But he put himself in a weak position by asking for help at the last minute, when governments were at loggerheads over the single currency and refugees.

Some Britons see this as a reason to get out, before the doomed edifice comes tumbling down. Yet the idea that quitting would spare Britain is the greatest illusion of all. Even if Britain can leave the EU it cannot leave Europe. The lesson going back centuries is that, because Britain is affected by what happens in Europe, it needs influence there. If Germany is too powerful, Britain should work with France to counterbalance it. If France wants the EU to be less liberal, Britain should work with the Dutch and the Nordics to stop it. If the EU is prospering, Britain needs to share in the good times. If the EU is failing, it has an interest in seeing the pieces land in the right place.

Over the years this newspaper has found much to criticise in the EU. It is an imperfect, at times maddening club. But it is far better than the alternative. We believe that leaving would be a terrible error. It would weaken Europe and it would impoverish and diminish Britain. Our vote goes to Remain.

What Democracy Is . . . and Is Not

PHILIPPE C. SCHMITTER AND TERRY LYNN KARL

For some time, the word democracy has been circulating as a debased currency in the political marketplace. Politicians with a wide range of convictions and practices strove to appropriate the label and attach it to their actions. Scholars, conversely, hesitated to use it—without adding qualifying adjectives—because of the ambiguity that surrounds it. The distinguished American political theorist Robert Dahl even tried to introduce a new term, “polyarchy,” in its stead in the (vain) hope of gaining a greater measure of conceptual precision. But for better or worse, we are “stuck” with democracy as the catchword of contemporary political discourse. It is the word that resonates in people’s minds and springs from their lips as they struggle for freedom and a better way of life; it is the word whose meaning we must discern if it is to be of any use in guiding political analysis and practice.

The wave of transitions away from autocratic rule that began with Portugal’s “Revolution of the Carnations” in 1974 and seems to have crested with the collapse of communist regimes across Eastern Europe in 1989 has produced a welcome convergence toward [a] common definition of democracy.¹ Everywhere there has been a silent abandonment of dubious adjectives like “popular,” “guided,” “bourgeois,” and “formal” to modify “democracy.” At the same time, a remarkable consensus has emerged concerning the minimal conditions that politics must meet in order to merit the prestigious appellation of “democratic.” Moreover, a number of international organizations now monitor how well these standards are met; indeed, some countries even consider them when formulating foreign policy.²

What Democracy Is

Let us begin by broadly defining democracy and the generic concepts that distinguish it as a unique system for organizing relations between rulers and the ruled. We will then briefly review *procedures*, the rules and arrangements that are needed if democracy is to endure. Finally, we will discuss two operative *principles* that make democracy work. They are not expressly included among the generic concepts or formal procedures, but the prospect for democracy is grim if their underlying conditioning effects are not present.

One of the major themes of this essay is that democracy does not consist of a single unique set of institutions. There are many types of democracy, and their diverse practices produce a similarly varied set of effects. The specific form democracy takes is

contingent upon a country’s socioeconomic conditions as well as its entrenched state structures and policy practices.

*Modern political democracy is a system of governance in which rulers are held accountable for their actions in the public realm by citizens, acting indirectly through the competition and cooperation of their elected representatives.*³

A *regime or system of governance* is an ensemble of patterns that determines the methods of access to the principal public offices; the characteristics of the actors admitted to or excluded from such access; the strategies that actors may use to gain access; and the rules that are followed in the making of publicly binding decisions. To work properly, the ensemble must be institutionalized—that is to say, the various patterns must be habitually known, practiced, and accepted by most, if not all, actors. Increasingly, the preferred mechanism of institutionalization is a written body of laws undergirded by a written constitution, though many enduring political norms can have an informal, prudential, or traditional basis.⁴

For the sake of economy and comparison, these forms, characteristics, and rules are usually bundled together and given a generic label. Democratic is one; others are autocratic, authoritarian, despotic, dictatorial, tyrannical, totalitarian, absolutist, traditional, monarchic, obligarchic, plutocratic, aristocratic, and sultanistic.⁵ Each of these regime forms may in turn be broken down into subtypes.

Like all regimes, democracies depend upon the presence of *rulers*, persons who occupy specialized authority roles and can give legitimate commands to others. What distinguishes democratic rulers from nondemocratic ones are the norms that condition how the former come to power and the practices that hold them accountable for their actions.

The *public realm* encompasses the making of collective norms and choices that are binding on the society and backed by state coercion. Its content can vary a great deal across democracies, depending upon preexisting distinctions between the public and the private, state and society, legitimate coercion and voluntary exchange, and collective needs and individual preferences. The liberal conception of democracy advocates circumscribing the public realm as narrowly as possible, while the socialist or social-democratic approach would extend that realm through regulation, subsidization, and, in some cases, collective ownership of property. Neither is intrinsically more democratic than the other—just *differently* democratic. This implies that measures aimed at “developing the private sector”

are no more democratic than those aimed at "developing the public sector." Both, if carried to extremes, could undermine the practice of democracy, the former by destroying the basis for satisfying collective needs and exercising legitimate authority; the latter by destroying the basis for satisfying individual preferences and controlling illegitimate government actions. Differences of opinion over the optimal mix of the two provide much of the substantive content of political conflict within established democracies.

Citizens are the most distinctive element in democracies. All regimes have rulers and a public realm, but only to the extent that they are democratic do they have citizens. Historically, severe restrictions on citizenship were imposed in most emerging or partial democracies according to criteria of age, gender, class, race, literacy, property ownership, tax-paying status, and so on. Only a small part of the total population was eligible to vote or run for office. Only restricted social categories were allowed to form, join, or support political associations. After protracted struggle—in some cases involving violent domestic upheaval or international war—most of these restrictions were lifted. Today, the criteria for inclusion are fairly standard. All native-born adults are eligible, although somewhat higher age limits may still be imposed upon candidates for certain offices. Unlike the early American and European democracies of the nineteenth century, none of the recent democracies in southern Europe, Latin America, Asia, or Eastern Europe has even attempted to impose formal restrictions on the franchise or eligibility to office. When it comes to informal restrictions on the effective exercise of citizenship rights, however, the story can be quite different. This explains the central importance (discussed below) of procedures.

Competition has not always been considered an essential defining condition of democracy. "Classic" democracies presumed decision making based on direct participation leading to consensus. The assembled citizenry was expected to agree on a common course of action after listening to the alternatives and weighing their respective merits and demerits. A tradition of hostility to "faction" and "particular interests" persists in democratic thought, but at least since *The Federalist Papers* it has become widely accepted that competition among factions is a necessary evil in democracies that operate on a more-than-local scale. Since, as James Madison argued, "the latent causes of faction are sown into the nature of man," and the possible remedies for "the mischief of faction" are worse than the disease, the best course is to recognize them and to attempt to control their effects.⁶ Yet while democrats may agree on the inevitability of factions, they tend to disagree about the best forms and rules for governing factional competition. Indeed, differences over the preferred modes and boundaries of competition contribute most to distinguishing one subtype of democracy from another.

The most popular definition of democracy equates it with regular *elections*, fairly conducted and honestly counted. Some even consider the mere fact of elections—even ones from which specific parties or candidates are excluded, or in which substantial portions of the population cannot freely participate—as a sufficient condition for the existence of democracy. This fallacy

has been called "electoralism" or "the faith that merely holding elections will channel political action into peaceful contests among elites and accord public legitimacy to the winners"—no matter how they are conducted or what else constrains those who win them.⁷ However central to democracy, elections occur intermittently and only allow citizens to choose between the highly aggregated alternatives offered by political parties, which can, especially in the early stages of a democratic transition, proliferate in a bewildering variety. During the intervals between elections, citizens can seek to influence public policy through a wide variety of other intermediaries: interest associations, social movements, locality groupings, clientelistic arrangements, and so forth. *Modern democracy, in other words, offers a variety of competitive processes and channels for the expression of interests and values—associational as well as partisan, factional as well as territorial, collective as well as individual. All are integral to its practice.*

However central to democracy, elections occur intermittently and only allow citizens to choose between the highly aggregated alternatives offered by political parties . . .

Another commonly accepted image of democracy identifies it with *majority rule*. Any governing body that makes decisions by combining the votes of more than half of those eligible and present is said to be democratic, whether that majority emerges within an electorate, a parliament, a committee, a city council, or a party caucus. For exceptional purposes (e.g., amending the constitution or expelling a member), "qualified majorities" of more than 50 percent may be required, but few would deny that democracy must involve some means of aggregating the equal preferences of individuals.

A problem arises, however, when *numbers* meet *intensities*. What happens when a properly assembled majority (especially a stable, self-perpetuating one) regularly makes decisions that harm some minority (especially a threatened cultural or ethnic group)? In these circumstances, successful democracies tend to qualify the central principle of majority rule in order to protect minority rights. Such qualifications can take the form of constitutional provisions that place certain matters beyond the reach of majorities (bills of rights); requirements for concurrent majorities in several different constituencies (confederalism); guarantees securing the autonomy of local or regional governments against the demands of the central authority (federalism); grand coalition governments that incorporate all parties (consociationalism); or the negotiation of social pacts between major social groups like business and labor (neocorporatism). The most common and effective way of protecting minorities, however, lies in the everyday operation of interest associations and social movements. These reflect (some would say, amplify) the different intensities of preference that exist in the population and bring them to bear on democratically elected decision makers. Another way of putting this intrinsic tension between numbers

ANNUAL EDITIONS

and intensities would be to say that "in modern democracies, votes may be counted, but influences alone are weighted."

Cooperation has always been a central feature of democracy. Actors must voluntarily make collective decisions binding on the polity as a whole. They must cooperate in order to compete. They must be capable of acting collectively through parties, associations, and movements in order to select candidates, articulate preferences, petition authorities, and influence policies.

But democracy's freedoms should also encourage citizens to deliberate among themselves, to discover their common needs, and to resolve their differences without relying on some supreme central authority. Classical democracy emphasized these qualities, and they are by no means extinct, despite repeated efforts by contemporary theorists to stress the analogy with behavior in the economic marketplace and to reduce all of democracy's operations to competitive interest maximization. Alexis de Tocqueville best described the importance of independent groups for democracy in his *Democracy in America*, a work which remains a major source of inspiration for all those who persist in viewing democracy as something more than a struggle for election and re-election among competing candidates.⁸

In contemporary political discourse, this phenomenon of cooperation and deliberation via autonomous group activity goes under the rubric of "civil society." The diverse units of social identity and interest, by remaining independent of the state (and perhaps even of parties), not only can restrain the arbitrary actions of rulers, but can also contribute to forming better citizens who are more aware of the preferences of others, more self-confident in their actions, and more civic-minded in their willingness to sacrifice for the common good. At its best, civil society provides an intermediate layer of governance between the individual and the state that is capable of resolving conflicts and controlling the behavior of members without public coercion. Rather than overloading decision makers with increased demands and making the system ungovernable,⁹ a viable civil society can mitigate conflicts and improve the quality of citizenship—without relying exclusively on the privatism of the marketplace.

Representatives—whether directly or indirectly elected—do most of the real work in modern democracies. Most are professional politicians who orient their careers around the desire to fill key offices. It is doubtful that any democracy could survive without such people. The central question, therefore, is not whether or not there will be a political elite or even a professional political class, but how these representatives are chosen and then held accountable for their actions.

As noted above, there are many channels of representation in modern democracy. The electoral one, based on territorial constituencies, is the most visible and public. It culminates in a parliament or a presidency that is periodically accountable to the citizenry as a whole. Yet the sheer growth of government (in large part as a byproduct of popular demand) has increased the number, variety, and power of agencies charged with making public decisions and not subject to elections. Around these

agencies there has developed a vast apparatus of specialized representation based largely on functional interests, not territorial constituencies. These interest associations, and not political parties, have become the primary expression of civil society in most stable democracies, supplemented by the more sporadic interventions of social movements.

The new and fragile democracies that have sprung up since 1974 must live in "compressed time." They will not resemble the European democracies of the nineteenth and early twentieth centuries, and they cannot expect to acquire the multiple channels of representation in gradual historical progression as did most of their predecessors. A bewildering array of parties, interests, and movements will all simultaneously seek political influence in them, creating challenges to the polity that did not exist in earlier processes of democratization.

Procedures That Make Democracy Possible

The defining components of democracy are necessarily abstract, and may give rise to a considerable variety of institutions and subtypes of democracy. For democracy to thrive, however, specific procedural norms must be followed and civic rights must be respected. Any polity that fails to impose such restrictions upon itself, that fails to follow the "rule of law" with regard to its own procedures, should not be considered democratic. These procedures alone do not define democracy, but their presence is indispensable to its persistence. In essence, they are necessary but not sufficient conditions for its existence.

Robert Dahl has offered the most generally accepted listing of what he terms the "procedural minimal" conditions that must be present for modern political democracy (or as he puts it, "polyarchy") to exist:

1. Control over government decisions about policy is constitutionally vested in elected officials.
2. Elected officials are chosen in frequent and fairly conducted elections in which coercion is comparatively uncommon.
3. Practically all adults have the right to vote in the election of officials.
4. Practically all adults have the right to run for elective offices.
5. Citizens have a right to express themselves without the danger of severe punishment on political matters broadly defined. . . .
6. Citizens have a right to seek out alternative sources of information. Moreover, alternative sources of information exist and are protected by law.
7. . . . Citizens also have the right to form relatively independent associations or organizations, including independent political parties and interest groups.¹⁰

These seven conditions seem to capture the essence of procedural democracy for many theorists, but we propose to add two others. The first might be thought of as a further refinement

of item (1), while the second might be called an implicit prior condition to all seven of the above.

1. Popularly elected officials must be able to exercise their constitutional powers without being subjected to overriding (albeit informal) opposition from unelected officials. Democracy is in jeopardy if military officers, entrenched civil servants, or state managers retain the capacity to act independently of elected civilians or even veto decisions made by the people's representatives. Without this additional caveat, the militarized politics of contemporary Central America, where civilian control over the military does not exist, might be classified by many scholars as democracies, just as they have been (with the exception of Sandinista Nicaragua) by U.S. policy makers. The caveat thus guards against what we earlier called "electoralism"—the tendency to focus on the holding of elections while ignoring other political realities.
2. The polity must be self-governing; it must be able to act independently of constraints imposed by some other overarching political system. Dahl and other contemporary democratic theorists probably took this condition for granted since they referred to formally sovereign nation-states. However, with the development of blocs, alliances, spheres of influence, and a variety of "neocolonial" arrangements, the question of autonomy has been a salient one. Is a system really democratic if its elected officials are unable to make binding decisions without the approval of actors outside their territorial domain? This is significant even if the outsiders are relatively free to alter or even end the encompassing arrangement (as in Puerto Rico), but it becomes especially critical if neither condition obtains (as in the Baltic states).

Principles That Make Democracy Feasible

Lists of component processes and procedural norms help us to specify what democracy is, but they do not tell us much about how it actually functions. The simplest answer is "by the consent of the people"; the more complex one is "by the contingent consent of politicians acting under conditions of bounded uncertainty."

In a democracy, representatives must at least informally agree that those who win greater electoral support or influence over policy will not use their temporary superiority to bar the losers from taking office or exerting influence in the future, and that in exchange for this opportunity to keep competing for power and place, momentary losers will respect the winners' right to make binding decisions. Citizens are expected to obey the decisions ensuing from such a process of competition, provided its outcome remains contingent upon their collective preferences, as expressed through fair and regular elections or open and repeated negotiations.

The challenge is not so much to find a set of goals that command widespread consensus as to find a set of rules that embody contingent consent. The precise shape of this "democratic bargain," to use Dahl's expression,¹¹ can vary a good deal from society to society. It depends on social cleavages and such subjective factors as mutual trust, the standard of fairness, and the willingness to compromise. It may even be compatible with a great deal of dissensus on substantive policy issues.

All democracies involve a degree of uncertainty about who will be elected and what policies they will pursue. Even in those polities where one party persists in winning elections or one policy is consistently implemented, the possibility of change through independent collective action still exists, as in Italy, Japan, and the Scandinavian social democracies. If it does not, the system is not democratic, as in Mexico, Senegal, or Indonesia.

But the uncertainty embedded in the core of all democracies is bounded. Not just any actor can get into the competition and raise any issue he or she pleases—there are previously established rules that must be respected. Not just any policy can be adopted—there are conditions that must be met. Democracy institutionalizes "normal," limited political uncertainty. These boundaries vary from country to country. Constitutional guarantees of property, privacy, expression, and other rights are a part of this, but the most effective boundaries are generated by competition among interest groups and cooperation within civil society. Whatever the rhetoric (and some polities appear to offer their citizens more dramatic alternatives than others), once the rules of contingent consent have been agreed upon, the actual variation is likely to stay within a predictable and generally accepted range.

This emphasis on operative guidelines contrasts with a highly persistent, but misleading theme in recent literature on democracy—namely, the emphasis upon "civic culture." The principles we have suggested here rest on rules of prudence, not on deeply ingrained habits of tolerance, moderation, mutual respect, fair play, readiness to compromise, or trust in public authorities. Waiting for such habits to sink deep and lasting roots implies a very slow process of regime consolidation—one that takes generations—and it would probably condemn most contemporary experiences *ex hypothesi* to failure. Our assertion is that contingent consent and bounded uncertainty can emerge from the interaction between antagonistic and mutually suspicious actors and that the far more benevolent and ingrained norms of a civic culture are better thought of as a *product* and not a producer of democracy.

How Democracies Differ

Several concepts have been deliberately excluded from our generic definition of democracy, despite the fact that they have been frequently associated with it in both everyday practice and scholarly work. They are, nevertheless, especially important when it comes to distinguishing subtypes of democracy. Since no single set of actual institutions, practices, or values embodies democracy, polities moving away from authoritarian rule can

ANNUAL EDITIONS

mix different components to produce different democracies. It is important to recognize that these do not define points along a single continuum of improving performance, but a matrix of potential combinations that are *differently* democratic.

1. *Consensus*: All citizens may not agree on the substantive goals of political action or on the role of the state (although if they did, it would certainly make governing democracies much easier).
2. *Participation*: All citizens may not take an active and equal part in politics, although it must be legally possible for them to do so.
3. *Access*: Rulers may not weigh equally the preferences of all who come before them, although citizenship implies that individuals and groups should have an equal opportunity to express their preferences if they choose to do so.
4. *Responsiveness*: Rulers may not always follow the course of action preferred by the citizenry. But when they deviate from such a policy, say on grounds of "reason of state" or "overriding national interest," they must ultimately be held accountable for their actions through regular and fair processes.
5. *Majority rule*: Positions may not be allocated or rules may not be decided solely on the basis of assembling the most votes, although deviations from this principle usually must be explicitly defended and previously approved.
6. *Parliamentary sovereignty*: The legislature may not be the only body that can make rules or even the one with final authority in deciding which laws are binding, although where executive, judicial, or other public bodies make that ultimate choice, they too must be accountable for their actions.
7. *Party government*: Rulers may not be nominated, promoted, and disciplined in their activities by well-organized and programmatically coherent political parties, although where they are not, it may prove more difficult to form an effective government.
8. *Pluralism*: The political process may not be based on a multiplicity of overlapping, voluntaristic, and autonomous private groups. However, where there are monopolies of representation, hierarchies of association, and obligatory memberships, it is likely that the interests involved will be more closely linked to the state and the separation between the public and private spheres of action will be much less distinct.
9. *Federalism*: The territorial division of authority may not involve multiple levels and local autonomies, least of all ones enshrined in a constitutional document, although some dispersal of power across territorial and/or functional units is characteristic of all democracies.
10. *Presidentialism*: The chief executive officer may not be a single person and he or she may not be directly elected by the citizenry as a whole, although some concentration of authority is present in all democracies, even if

it is exercised collectively and only held indirectly accountable to the electorate.

11. *Checks and Balances*: It is not necessary that the different branches of government be systematically pitted against one another, although governments by assembly, by executive concentrations, by judicial command, or even by dictatorial fiat (as in time of war) must be ultimately accountable to the citizenry as a whole.

While each of the above has been named as an essential component of democracy, they should instead be seen either as indicators of this or that type of democracy, or else as useful standards for evaluating the performance of particular regimes. To include them as part of the generic definition of democracy itself would be to mistake the American polity for the universal model of democratic governance. Indeed, the parliamentary, consociational, unitary, corporatist, and concentrated arrangements of continental Europe may have some unique virtues for guiding polities through the uncertain transition from autocratic to democratic rule.¹²

What Democracy Is Not

We have attempted to convey the general meaning of modern democracy without identifying it with some particular set of rules and institutions or restricting it to some specific culture or level of development. We have also argued that it cannot be reduced to the regular holding of elections or equated with a particular notion of the role of the state, but we have not said much more about what democracy is not or about what democracy may not be capable of producing.

There is an understandable temptation to load too many expectations on this concept and to imagine that by attaining democracy, a society will have resolved all of its political, social, economic, administrative, and cultural problems. Unfortunately, "all good things do not necessarily go together."

First, democracies are not necessarily more efficient economically than other forms of government. Their rates of aggregate growth, savings, and investment may be no better than those of nondemocracies. This is especially likely during the transition, when propertied groups and administrative elites may respond to real or imagined threats to the "rights" they enjoyed under authoritarian rule by initiating capital flight, disinvestment, or sabotage. In time, depending upon the type of democracy, benevolent long-term effects upon income distribution, aggregate demand, education, productivity, and creativity may eventually combine to improve economic and social performance, but it is certainly too much to expect that these improvements will occur immediately—much less that they will be defining characteristics of democratization.

Second, democracies are not necessarily more efficient administratively. Their capacity to make decisions may even be slower than that of the regimes they replace, if only because more actors must be consulted. The costs of getting things done may be higher, if only because "payoffs" have to be made to a wider and more resourceful set of clients (although one should

never underestimate the degree of corruption to be found within autocracies). Popular satisfaction with the new democratic government's performance may not even seem greater, if only because necessary compromises often please no one completely, and because the losers are free to complain.

Third, democracies are not likely to appear more orderly, consensual, stable, or governable than the autocracies they replace. This is partly a byproduct of democratic freedom of expression, but it is also a reflection of the likelihood of continuing disagreement over new rules and institutions. These products of imposition or compromise are often initially quite ambiguous in nature and uncertain in effect until actors have learned how to use them. What is more, they come in the aftermath of serious struggles motivated by high ideals. Groups and individuals with recently acquired autonomy will test certain rules, protest against the actions of certain institutions, and insist on renegotiating their part of the bargain. Thus the presence of antisystem parties should be neither surprising nor seen as a failure of democratic consolidation. What counts is whether such parties are willing, however reluctantly, to play by the general rules of bounded uncertainty and contingent consent.

Governability is a challenge for all regimes, not just democratic ones. Given the political exhaustion and loss of legitimacy that have befallen autocracies from sultanistic Paraguay to totalitarian Albania, it may seem that only democracies can now be expected to govern effectively and legitimately. Experience has shown, however, that democracies too can lose the ability to govern. Mass publics can become disenchanted with their performance. Even more threatening is the temptation for leaders to fiddle with procedures and ultimately undermine the principles of contingent consent and bounded uncertainty. Perhaps the most critical moment comes once the politicians begin to settle into the more predictable roles and relations of a consolidated democracy. Many will find their expectations frustrated; some will discover that the new rules of competition put them at a disadvantage; a few may even feel that their vital interests are threatened by popular majorities.

Finally, democracies will have more open societies and polities than the autocracies they replace, but not necessarily more open economies. Many of today's most successful and well-established democracies have historically resorted to protectionism and closed borders, and have relied extensively upon public institutions to promote economic development. While the long-term compatibility between democracy and capitalism does not seem to be in doubt, despite their continuous tension, it is not clear whether the promotion of such liberal economic goals as the right of individuals to own property and retain profits, the clearing function of markets, the private settlement of disputes, the freedom to produce without government regulation, or the privatization of state-owned enterprises necessarily furthers the consolidation of democracy. After all, democracies do need to levy taxes and regulate certain transactions, especially where private monopolies and oligopolies exist. Citizens or their representatives may decide that it is desirable to protect the rights of collectivities from encroachment by individuals, especially propertied ones, and

they may choose to set aside certain forms of property for public or cooperative ownership. In short, notions of economic liberty that are currently put forward in neoliberal economic models are not synonymous with political freedom—and may even impede it.

Democratization will not necessarily bring in its wake economic growth, social peace, administrative efficiency, political harmony, free markets, or "the end of ideology." Least of all will it bring about "the end of history." No doubt some of these qualities could make the consolidation of democracy easier, but they are neither prerequisites for it nor immediate products of it. Instead, what we should be hoping for is the emergence of political institutions that can peacefully compete to form governments and influence public policy, that can channel social and economic conflicts through regular procedures, and that have sufficient linkages to civil society to represent their constituencies and commit them to collective courses of action. Some types of democracies, especially in developing countries, have been unable to fulfill this promise, perhaps due to the circumstances of their transition from authoritarian rule.¹³ The democratic wager is that such a regime, once established, will not only persist by reproducing itself within its initial confining conditions, but will eventually expand beyond them.¹⁴ Unlike authoritarian regimes, democracies have the capacity to modify their rules and institutions consensually in response to changing circumstances. They may not immediately produce all the goods mentioned above, but they stand a better chance of eventually doing so than do autocracies.

Notes

1. For a comparative analysis of the recent regime changes in southern Europe and Latin America, see Guillermo O'Donnell, Philippe C. Schmitter, and Laurence Whitehead, eds., *Transitions from Authoritarian Rule*, 4 vols. (Baltimore: Johns Hopkins University Press, 1986). For another compilation that adopts a more structural approach see Larry Diamond, Juan Linz, and Seymour Martin Lipset, eds., *Democracy in Developing Countries*, vols. 2, 3, and 4 (Boulder, Colo.: Lynne Rienner, 1989).
2. Numerous attempts have been made to codify and quantify the existence of democracy across political systems. The best known is probably Freedom House's *Freedom in the World: Political Rights and Civil Liberties*, published since 1973 by Greenwood Press and since 1988 by University Press of America. Also see Charles Humana, *World Human Rights Guide* (New York: Facts on File, 1986).
3. The definition most commonly used by American social scientists is that of Joseph Schumpeter: "that institutional arrangement for arriving at political decisions in which individuals acquire the power to decide by means of a competitive struggle for the people's vote." *Capitalism, Socialism, and Democracy* (London: George Allen and Unwin, 1943), 269. We accept certain aspects of the classical procedural approach to modern democracy, but differ primarily in our emphasis on the accountability of rulers to citizens and the relevance of mechanisms of competition other than elections.

ANNUAL EDITIONS

4. Not only do some countries practice a stable form of democracy without a formal constitution (e.g., Great Britain and Israel), but even more countries have constitutions and legal codes that offer no guarantee of reliable practice. On paper, Stalin's 1936 constitution for the USSR was a virtual model of democratic rights and entitlements.
5. For the most valiant attempt to make some sense out of this thicket of distinctions, see Juan Linz, "Totalitarian and Authoritarian Regimes" in *Handbook of Political Science*, eds. Fred I. Greenstein and Nelson W. Polsby (Reading Mass.: Addison Wesley, 1975), 175-411.

Critical Thinking

1. List the conditions that Robert Dahl identifies as "minimal" for democracy.
2. What does it mean that "no single set of actual institutions, practices, or values embodies democracy"?
3. What do the authors say democracy is not?

PHILIPPE C. SCHMITTER is professor of political science and director of the Center for European Studies at Stanford University. **TERRY LYNN KARL** is associate professor of political science and director of the Center for Latin American Studies at the same institution. The original, longer version of this essay was written at the request of the United States Agency for International Development, which is not responsible for its content.

Name _____

Kesslman Chapter 1 – Introduction to Comparative Politics

1. Outline/describe three **critical junctures** in world politics:
2. How has globalization impacted comparative politics?
3. What are the four themes of *Introduction to Comparative Politics*?
4. What is **comparative politics**?
5. What is the best way to begin the study of comparative politics? ____ How are comparisons made?

Key terms

- State –
- “Government”
- Nation-state –
- Regime
-

6. Describe the following Comparative Methods:

Qualitative analysis-

Quantitative analysis -

Rational choice theory

Middle level theory

Democratic transitions

7. What are the themes for Comparative analysis?
8. **Typology** –
9. Outline the minimum feature needed for a country to be a democracy?

Name _____

A Pretest for Comparative Government

Directions (1) Take this pretest without help, providing your best guess.

(2) Look up your answers and correct your pretest, providing specific information. Use the CIA world factbook, available at <https://www.cia.gov/library/publications/the-world-factbook/>

(3) Bring this to our next class be prepared to discuss your answers.

Use the AP Comparative Government Case Studies to answer the questions:

United Kingdom ; Russia; China; Mexico; Nigeria; Iran

Pretest Questions

1. Rank the nations we will study (include the US) from most to least populous. Indicate the population size according to the world fact book:

2. Rank the nations we will study (include the US) from highest to lowest life expectancy. Indicate the overall life expectancy.

3. Rank the nations we will study (include the US) with the highest percentage of its population under 15 years of age to the one with the lowest percentage under 15. Indicate the percentage.

4 . Rank the nations from largest to smallest in area and indicate the sq km.

5. Rank these nations from highest to lowest in the number of nations they border and indicate the number for each.

6. Rank these nations from most to least densely populated (people per square kilometer)

7. Rank these nations from the one with the highest percentage of arable land to the lowest

8. Rank these nations from highest to lowest per capita GDP and indicate the GDP per capita.

9. Rank these nations (include the US) in highest to lowest debt. Indicate the amount of debt.

10. Rank these nations from lowest to highest people per telephone (note you must add cell phones +land lines and divide by person). Indicate the ratio.

10. Which country has the most recently written constitution and what was the year it was written?

11. Who is the head of state in each nation and what is that person's title? Bonus points if you can name the political party each represents.

12. Who is the head of government in each nation and what is that person's title? Bonus points if you can name the political party each represents.

13. What is the term of office for each head of state?

14. What is the term of office for each head of government?

15. Is the legislature in each country unicameral or bicameral?

16. What is the name of the largest division of the legislature and how many seats does it have?

17. Is the political system in each of these countries federal or unitary?

18. How many ethnic groups in each nation?

Name _____

AP Comparative Government & Politics
Mr. Brady

Using Data to Study Development
Introduction

The four lessons that follow are designed to give students a better understanding of the concept of development, and for students to have some hands on practice comparing the level of development in countries covered in the Comparative Government & Politics curriculum. Development is a complicated concept for students to grasp because it is multifaceted in nature. There are many variables that can impact the level of development within a country. Moreover there are many variables that can be used to measure development. These variables include life expectancy, infant mortality, death rates, literacy, education levels, and population distribution. Countries can be developed in one area but not another. Additionally, students may find themselves surprised that countries that are considered developed may not have data to support that they are developed in all areas, and countries considered not as developed may have data to suggest that they are developed in other areas. In sum, these lessons will ask students to use data to test commonly held assumptions about the level of development within countries, and will inevitably lead to surprises. Ideally, these surprises will provoke useful classroom discussion and analysis.

Before beginning each lesson, make sure students have been introduced to and can give basic definitions of the key terms below. I would suggest introducing these terms formally in the classroom after students have read and/or defined them from their textbooks. Additionally, you may use the Democratization Briefing Paper (available on AP Central as a reference for you and your students). I would also suggest verbally testing students to be sure they are familiar with the key socioeconomic measurements of development before beginning. You can test for student understanding of these measurements by simply asking students what they would expect of each measurement in countries with certain socioeconomic conditions. For example, ask students, is life expectancy generally high or low in a developed country? What about in an underdeveloped country? Is infant mortality generally high or low in a developed country? What about in an underdeveloped country? Obviously, students should respond that they expect developing countries to have low life expectancy and high infant mortality.

You can also ask them to make correlations between variables. For example, ask them what correlations they might expect to see between wealth and inequality. Students might conclude, inaccurately, that rich countries are unequal while poor countries are less so. Students can also consider causation. For example, how do these variables relate to the preconditions for democracy? Ask them to speculate about how a high literacy rate, GDP, or Gini Index might cause a country to become more democratic. This is a good way to reinforce the key concepts of correlation and causation. As you go through the list with your class verbally you should be able to get a sense of whether or not your students grasp

the idea of development or if more review is necessary.

The definitions of the key terms on the pages three and four can be found in many Comparative Politics textbooks, but it is likely that you will have to consult a variety of sources, as no one textbook includes definitions of all of the key terms. Keep in mind that the definitions of these concepts may be slightly different in different textbooks, as political scientists tend to disagree on all elements of a key concept or term. Additional sources such as the CIA World Fact Book may also provide appropriate definitions of many of the key terms. This is available on line at <http://www.cia.gov/cia/publications/factbook/index.html>AP

Using Data to Study Development

Key Terms:

Political Measures of Development:

- 1) Developing country-
- 2) Third World Country-
- 3) Democratization-
- 4) Newly Industrialized Country (NIC)-
- 5) Import substitution-
- 6) Structural Adjustment-
- 7) Industrialization-
- 8) Neoliberalism-
- 9) Rule of Law (rule of law index)-

Socioeconomic Measurements of Development:

- 10) World Bank -
- 11) IMF -
- 12) Microcredit -
- 13) GDP (agriculture, industry, service)-
- 14) GNP-
- 15) Gini Index-
- 16) Life expectancy-
- 17) Death rate-
- 18) Literacy rate (male/female)-
- 19) Infant mortality rate-
- 20) Civil liberties and rights-
- 21) Women's rights-
- 22) Education levels (male/female)-
- 23) Population distribution (urban/rural)-
- 24) UN Human Development Index-
- 25) Transparency International data on corruption-

Name _____

Democratization Briefing Paper
Available on AP Central
(Students Access this on my wnhs.com web site)

Read the paper (it is long!) and define the key terms:

Democratic regime –

Procedural democracy –

Substantive democracy –

Democratization –

Three waves of democracy –

Identify/describe two preconditions of democracy –

1)

2)

democratization from above –

democratization from below –

military dictatorships –

personalistic authoritarian regimes –

single party authoritarian regimes –

democratic consolidation –

democratic responsiveness –

How does the author classify each of the following countries and what reasons does he give?

United Kingdom -

Russia -

China -

Mexico -

Nigeria-

Iran-

Exercise 1: Gini Coefficients

Gini Coefficient (or gini index) – measures the relative degree of socioeconomic inequality within a country. Perfect equality equals zero: all individuals (or households) receive the same annual income; there is zero inequality. Maximum inequality equals 100: only one individual (or household) monopolizes all (100 percent) of society's income and everybody else gets nothing. Any number between 0 and 100 represents the degree to which society's income distribution pattern deviates from perfect equality.

The quintiles indicated in the table below demonstrate the amount of total wealth the owned by the citizens in each quintile.

Country	Year	Gini Coefficient	Lowest 20%	Second 20%	Third 20%	Fourth 20%	Highest 20%
People's Republic of China	1995	41.5	5.5	9.8	14.9	22.3	47.5
Islamic Republic of Iran	1998	43	5.1	9.4	14.1	21.5	41.9
Mexico	1995	53.7	3.6	7.2	11.8	19.2	58.2
Nigeria	1992-93	45	4.0	8.9	14.4	23.4	49.3
Russia	1996	48	4.2	8.8	13.6	20.7	52.8
United Kingdom	1995	34.6	7.1	12.8	17.2	23.1	39.8

Income Distribution in Developing Countries Student Instructions

Country assignment: _____

Directions

1. Turn your newsprint to a landscape alignment.
2. Use your markers and write the name of your country clearly at the top of the page.
3. Write the Gini Index number of your country in the corner and circle it (see attached table)
4. Create a graph with an X and Y axis. Your graph will eventually look like the one below.
5. On the Y axis, you will create five bars and each bar will represent each of the quintiles on the table attached. Use your ruler to measure, and make each inch worth a value of five and one inch in height on your graph. The bars should also be approximately four inches in width, and be spaced apart one inch.

6. Underneath each bar that you created, label the appropriate quintile (first, second, third, etc.)
7. Color in the bars.
8. On the back of the page, answer the following questions:
 - Is the level of income distribution in this country relatively high or low?
 - Use country specific information from your reading and class discussion to explain the level of income distribution. Reasons should be drawn from the history of the country, government policies, and other factors discussed in the course. This information is commonly found in public policy sections of country specific chapters.
9. Tape your newsprint on the board.
- (10) Return to your seat and with your teacher; compare each of the graphs created and the reasons for the income distribution in each country.

Name _____

Exercise 2: Web Quest & Jigsaw
Assessing the level of Development
Chart (1) to be Completed By Students

Web Sites to Access:

- 1) www.freedomhouse.org
- 2) <http://www.cia.gov/cia/publications/factbook/index.html>
- 3) <http://www.humanrightsdata.com/> (click on "data & documentation") (then click on "CIRI data")
- 4) <http://www.iudp.org/>
- 5) http://www.transparency.org/cpi/2005/cpi2005_infocus.html

Country Assignment: _____

Political Development

1. Go to the first Web Site (Freedom House). What is Freedom House?
2. Describe the measurements of freedom applied to countries.
3. What is your country's score on Political Rights? _____ Civil Liberties _____?
4. Why do you think your country was given each of these scores?
5. What does this score tell you about the level of development in your country?

Social and Economic Development

6. Go to the second Web Site (CIA World Fact Book). Write down information about your country:
 - a) GDP per capita _____
 - Agriculture _____
 - Industry _____
 - Service _____
 - c) Life expectancy _____
 - d) Death rate _____
 - e) Literacy _____ (male _____ female _____)
 - f) Infant mortality _____

Women's Rights

7) Go to the third Web Site (The CIRI Human Rights Data Project). This Web Site contains research based information on a variety of countries. According to the site, "It is designed for use by scholars and students who seek to test theories about the causes and consequences of human rights violations."

Check the column for women's rights, columns Z, Y and AA, which correspond with women's political, economic and social rights.

The coding given is as follows: (0) =there are no rights for women. (1) there are some rights for women under the law but the government does not enforce the laws consistently (2) there are some rights for women under the law, and the government enforces some of the laws but tolerates a low level of discrimination against women (3) All or nearly all of women's rights are guaranteed by law, and the government enforces these rights and tolerates almost no discrimination against women. (-999 no data)

What is the level of women's economic rights?

What is the level of women's political rights?

What is the level of women's social rights?

Human Development

7. Go to the fourth Web Site, (The UN Human Development Index).

What does the index measure?

What is your country's HDI? (Find this by clicking "human development data" and searching for your assigned country. Then click "Human Development Report Country Fact Sheet).)

What is the relationship between geographic location and HDI?

How do you account for this?

What does the education index measure?

What is the education index for your country (the highest score is .99)?

Corruption

8. Go to the fifth Web Site, (Transparency International Data on Corruption).

What is your country's corruption index?

What is the relationship between corruption and poverty?

Name _____

**Assessing the Level of Development
Chart (2) To be Completed by Students**

Directions for students: Now that you have completed research on your country, you will be asked to compare the data you gathered with data gathered from the other countries. Your teacher will divide your country group and ask that you join a new group with at least one student per country. Complete the chart and answer the

	Freedom House Score	GDP	Life Expectancy	Death Rate	Literacy (M/F)	Infant Mortality Rate	Education Index	W	HDI	Transparency
United Kingdom										
Russia										
China										
Mexico										
Nigeria										
Iran										

Web Quest - Analysis Questions

Directions Review the table you created and answer the following questions:

1. Which two countries appear to be most developed overall?
2. What variables caused you to choose these two countries?
3. Which two countries appear to be the least developed overall?
4. What variables caused you to choose these two countries?
5. Make a list of all countries starting with least developed and moving to most developed. Be ready to defend your choices.
6. Compare Russia to China.
 - a. In what areas is Russia more developed than China?
 - b. What are reasons for what you observed above?
 - c. In what areas is China more developed than Russia?
 - d. What are reasons for what you observed above?
7. Compare Mexico to Iran.
 - (a) In what areas is Mexico more developed than Iran?
 - (b) What are reasons this?
 - (c) In what areas is Iran more developed than Mexico?
 - (d) What are reasons for this?
8. What country was most democratized, according to the Democratization Briefing paper? _____. Is this the same country as is most developed? _____. What about least democratized, according to the briefing paper? _____
9. What is the relationship between development and democracy? Identify the two development-related factors that are most important in causing a country to democratize.

Exercise 3: Rule of Law In Depth Analysis
<http://worldjusticeproject.org/what-rule-law>

How does your textbook define rule of law?

How does the Web Site above define rule of law?

China vs. Mexico on the WJP Index

<u>Factors</u>	<u>China (Provide ranking percentage from WJP Index)</u>	<u>Mexico (Provide ranking percentage from WJP Index)</u>	<u>What does this ranking mean? *</u>
<u>1. Limited Government Powers</u>			
<u>2. Absence of Corruption</u>			
<u>3. Order and Security</u>			
<u>4. Fundamental Rights</u>			
<u>5. Open Government</u>			
<u>6. Regulatory Enforcement</u>			
<u>7. Civil Justice</u>			
<u>8. Criminal Justice</u>			

** Please take note of the sub-factors under each factor to get an in-depth understanding of what each factor is measuring.*

Rule of Law Analysis Questions

In what areas is China's rule of law higher than Mexico's?

In what areas is Mexico's rule of law higher than China's?

What conclusions can you draw from this data? Why is it important to address the rule of law?

After seeing the results of China and Mexico's ranking, which country would you rather live in?

Are there any recent legal reforms happening in China or Mexico that may change either country's ranking on the Index? (Tie in current events here).

Why is it important to address the rule of law?

Name _____

Globalization Briefing Paper – AP Comparative Politics
Available on AP Central (Students Access this on my wnhs.com Site)

Directions Read article/answer questions on your own paper.

1. What is globalization?
2. “Historical perspective” – paraphrase. How do some countries integrate themselves, and how do some attempt to isolate themselves?
3. What is “economic globalization”?
4. What are Multinational corporations? How have they impacted globalization?
5. How has globalization impacted inequality? Give examples from 2-3 of the countries we will study.
6. What has globalization done to the urban/rural living patterns and what are the consequences?
7. How has globalization harmed women more than men?
8. How does globalization effect the local markets?
9. How are developed countries left out of the global market?
10. Why has globalization had negative impacts on the environment?
11. Give examples of the above in Nigeria.
12. Identify/describe three transnational organizations that work on regional problems.
13. How has globalization impacted the **sovereignty** (ability to make decisions internally)?
14. Give an example of the above using the role of the EU (European Union) on Britain’s sovereignty. and EU.
15. Give another example of the above using the role of the WTO (World Trade Organization) on China’s sovereignty.
16. How has globalization impacted the spreading of democracy?
17. What are some cultural consequences of globalization?
18. How has the power of states decreased and the power of non states increased?
19. Global citizenship – what is the role of Non Governmental Organizations?
20. What are some of the costs of globalization?

21. What are some of the benefits of globalization?

corporatism, where the state determines which groups are brought in; and **societal corporatism** (or **neocorporatism**), where interest groups take the lead and dominate the state.

Political Elites and Political Recruitment

All countries have **political elites**, or leaders who have a disproportionate share of policy-making power. In democracies, these people are selected by competitive elections, but they still may be readily identified as political elites. Every country must establish a method of elite **recruitment**, or ways to identify and select people for future leadership positions. Also, countries must be concerned about leadership **succession**, or the process that determines the procedure for replacing leaders when they resign, die, or are no longer effective.

TOPIC SIX: PUBLIC POLICY

All political systems set policy, whether by legislative vote, executive decision, judicial rulings, or a combination of the three. In many countries interest groups and political parties also play large roles in policymaking. Policy is generally directed toward addressing issues and solving problems. Many issues are similar in almost all countries, such as the need to improve or stabilize the economy or to provide for a common defense against internal and external threats. However, governments differ in the approaches they take to various issues, as well as the importance they place on solving particular problems.

Common policy issues include:

- **Economic performance** – Governments are often concerned with economic health/or problems within their borders. Most also participate in international trade, so their economies are deeply affected by their international imports and exports. The six core countries provide a variety of approaches that states may take, as well as an assortment of consequences of both good and poor economic performances. Economic performance may be measured in any number of ways including 1) **Gross Domestic Product (GDP)** – all the goods and services produced by a country's economy in a given year, excluding income citizens and groups earn outside the country; 2) **Gross**

THE GINI INDEX FOR SELECTED COUNTRIES

Late 2000s

Norway	.26
Canada	.33
United Kingdom	.36
New Zealand	.36
Russia	.375
Iran	.383
United States	.41
China	.415
Nigeria	.43
Mexico	.48

A low Gini coefficient indicates more equal income or wealth distribution. With a Gini coefficient indicating unequal income or wealth distribution, 0 corresponds to perfect equality (everyone has the same income), and 1 corresponds to complete inequality (one person has all the income, everyone else has zero income).

Source: UN Human Development Report, 2009

- **National Product (GNP)** – like GDP, but also includes income citizens earned outside the country; 3) **GNP per capita** – divides the GNP by the population of the country; 4) **Purchasing Power Parity (PPP)** – a figure like GNP, except that it takes into consideration what people can buy using their income in the local economy.

- **Social welfare** – Citizens' social welfare needs include health, employment, family assistance, and education. States provide different levels of support in each area, and they display many different attitudes toward government responsibility for social welfare. Some measures of social welfare are literacy rates, distribution of income, life expectancy, and education levels. Two commonly used measures of social welfare are: 1) **The Gini Index**, a mathematical formula that measures the amount of economic inequality in a society; and 2) the **Human Development Index (HDI)** that measures the well-being of a country's people by factoring in adult literacy, life expectancy, and educational enrollment, as well as GDP.
- **Civil liberties, political rights, and political freedoms** – Political rights usually refer to the promotion of equality, whereas civil liberties refer to promotion of freedom. Although the two concepts overlap, the protection of political rights usually implies that the government should be proactive in promoting them. In addition to differences in how much proactive government support is advisable, liberal democracies also vary in terms of which civil liberties should be preserved. All liberal democracies uphold the rights of free speech and association, but they vary in terms of rights to assemble and/or criticize the government. The constitutions of many liberal democracies guarantee civil liberties and rights, and most communist, post-communist, developing, and less developed countries pay lip service to them. **Freedom House**, an organization that studies democracy around the world, ranks countries on a 1 to 7 freedom scale, with countries given a 1 being the most free and those given a 7 being the least free. A number of post-communist countries have made significant strides in this area in recent years, but many others remain highly authoritarian.
- **Environment** – Many modern democratic states take a big interest in protecting the environment. European countries in particular have had a surge of interest expressed through the formation of "green" parties that focus on the environment. Environmental groups have also promoted the development of a global civil society by operating across national borders. For

example, environmental groups in the western democracies, assist environmental groups in developing nations by providing advice and resources to address the issues facing their countries. National groups meet at international conferences and network via the internet to address environmental issues on a global level.

TABLE OF COMPARATIVE INDEXES

	INDEX CHINA	IRAN	MEXICO	NIGERIA	RUSSIA	BRITAIN
GDP (in billions)	12,380	997.4	1761	450.5	2,504	2,323
GDP per capita	6,076	7,211	8,900	1,631	14,247	38,589
PPP per capita	9,100	13,100	15,300	2,700	17,700	36,700
HDI	69.9	74.2	77.5	47.1	78.8	87.5

Note: GDP, GDP per capita, and PPP per capita are all converted and compared to U.S. dollars.

Sources: International Monetary Fund (2012), CIA World Factbook, 2013, Human Development Report, United Nations, 2013

COMPARATIVE INDEXES

A common way countries can be compared is with statistical data. Some of these measures are familiar ones, because they are often found in news stories, journals, and textbooks. They are often presented as if they are an authoritative description of a country's economy and society. However, these statistics are estimates compiled by statistical bureaus of each country's government, as well as by international agencies such as the United Nations and the World Bank. Here are some of the statistical indicators most commonly used by those who study comparative government.

Gross Domestic Product (GDP) is an economic indicator that compiles data on all forms of wealth produced within a country, including all goods (agricultural crops, for example) and industrial products (such as cars) and services (such as banking, education, and so on, henceforth). GDP is calculated by each nation, but there are standards of accuracy established by the international organizations that use them.

GDP per capita is an economic measure that takes the total value of a country's GDP and divides it by the country's population. This can reveal more information than straight-forward GDP numbers. Two countries with fairly similar GDPs, for example, might lead one to think they have similar standards of living. However, when measured against each other using GDP per capita, the country with the greater population will have a lower GDP than the other.

Purchasing Power Parity (PPP) per capita adjusts for relative costs of living in various countries and converts different economies into a single currency, usually the U.S. dollar. GDP can be deceiving, since the same amount of money will buy more in some countries than others. PPP per capita attempts to estimate the buying power of income in each country by comparing costs of basic commodities, such as housing and food, using prices in the U.S. as a benchmark.

Human Development Index (HDI) measures a country's standard of living. First developed by the United Nations in 1991, HDI combines population statistics of years of schooling, adult literacy, life expectancy, and income levels. The index scale is from 0 to 100, with countries scoring over 80 are considered to have high levels of human development, those under 50 are low.

IMPORTANT TERMS AND CONCEPTS

advanced democracies
 authoritarian regime
 bicameral, unicameral legislatures
 bureaucratic authoritarian regimes
 bureaucracy
