**This is one of Africa's many diamonds**

Africa is the 2nd largest continent

# *ALL ABOUT TIGERS*

## *Physical Description Of A Tiger*

Most tigers have tan fur with dark stripes. All tigers have a white underside with dark stripes. Tigers are mammals, but also endangered. This is because people kill them for their fur and many other reasons. Tigers are carnivores and can swim. Tigers are one of the largest cats on earth!

Some male tigers can attack up to 306 kilograms in one strike! They can also eat up to 40 pounds of meat in one meal! Tigers are very good predators and have very good camouflage.

This is a Physical Description of a tiger.

**You can clearly see the tiger's striped pattern**

# *THE FAMILY OF A TIGER*

Tiger cubs will live with their family until they're about 2 years old. The mother can give birth to 2 or 3 cubs at one time.

Tigers can mate at any time of year, but most-likely will in November to April, but Bengal Tigers often live on their own.

When the cubs are born, they're blind and deaf. Once born, the cubs count on their mother and don't leave her side until they're 2 or 3 years old. Then they go off on their own. Tigers will live for 15 to 20 years.

**This is a baby tiger**

# *WHAT TIGERS EAT*

Tigers are meat eaters/carnivores. Tigers hunt for food, they attack it! Tigers will eat up to 40 pounds of meat at one time!!

Tiger eat almost everything, even other tigers! They'll eat a type of cattle called a Gaur. These cattle are HUGE and if a tiger gets this meal, it will last up to 4 days!

When food is scarce, tigers will even eat frogs! They also eat wild hogs, water buffalo, zebras, and deer!

**Tigers often eat deer, but eat many other animals.**

# *A TIGERS ENEMIES*

Tigers will fight other tigers and hurt each other. They're even enemies with giraffes! Giraffes don't look harmful, but they can be!! Their legs are so powerful, it could kill a tiger!!

A tiger's main enemy is a human. People will kill a tiger for its fur. People believe that some parts of a tiger's body can be used for medicine!

**Tigers have very many  
different enemies**

# *OTHER INTERESTING FACTS*

One adult tiger can weigh more than 4 male adults put together! A tiger's claws and teeth are about 3.5 inches long! Plus, a tiger's tail is 3 to 4 feet long! That's about half as long as its body!

**Tigers are also very good swimmers!**

# *PHYSICAL DESCRIPTION OF A LION*

A lion has a mane if its a male. Its body color is yellow and orange. the female does not have the mane around the neck.

this is what a male lion looks like

# *A LION'S FAMILY*

Lions live with family to keep the lion cubs safe from other animals. The mother cares a lot about her cubs so they don't get hurt. When the cubs get older they can wander without there mom or dad watching .

These are two lions cuddling

# *A lion's Enemies*

Lions can camouflage from the dry grass. Its enemies are big buffalo and people. People try to kill lions for there fur. Buffalo try to eat them .

# *WHAT LIONS EAT*

They eat dik  
diks, boffo, elephants, zebras, carrion, wild  
hog, axis deer. all of those animals  
are meat and lions eat meat. lions are  
meat eaters.

This are lions eating a zebra

# *INTERESTING FACTS*

They have a massive speed of running. The mother's cubs play with her tail when her tail goes side to side, and that trains them to hunt. A male's roar can be heard 5 miles away. After eating, a thirsty lion may drink for as long as 20 minutes.

**this is a lion playing  
with its mothers tail**

*physical  
description*

African elephants are mammals. An African elephant can weigh anywhere between 7,000 to 13,200 lbs. And is about 5 feet wide and 11 feet tall. It does not have fur, scales, or feathers. But it does cool its self by fanning its self with its ears. It breathes from the 2 holes at the bottom of its trunk or its mouth.

*the family  
of an  
elephant*

A mother gives birth to an elephant every 5 years. Most of the herds have anywhere between 5 and 20 elephants. A few male elephants leave the herd. Their lifespan is 60 to 70 years after they are born. They spend most of their lives migrating to find food and a safe place to rest.

*what  
elephants  
eat*

Elephants eat plants. Such as grass, trees leaves, flowers, wild fruits, twigs, shrubs, bamboo and bananas. They also eat bark, roots, stems and vines. A male can eat 350 pounds of food a day.

# *Elephant's Enemies*

Lions and tigers eat elephants and some more but those are the main 2. In Africa, elephants are being killed for ivory.

# *Interesting Facts*

1. When elephants are born they weigh over 200 pounds.
2. Elephants eat 350 pounds of food a day.
3. African elephants are the largest mammals on earth.

# *Anna Sekeres*

*I'm currently 9 years old and I live Westerville, Ohio. Some of my hobbies are dancing, art, and reading. I count on my friends to help me in hard situations. I also count on my family to do the same thing. I particularly like to write about animals. This is a little bit about myself.*

# *Tara Brunfield*

My name is Tara and I'm currently 8 years old and I live in Westerville Ohio. Many people are interested to know that my hobbies are running, sports, painting. most of the time, I surround myself with people I care about. Some of those people are my friends and my family. I particularly enjoy writing about animals.

# Grace Geary

*My name is Grace I live in Westerville Ohio. I am currently 8 years old. My hobbies are art and reading. Most of the time I surround myself with people that I care about. Some of those people are my best friend Avery and my family.*

# *Glossary*

Mammal-any warm blooded animal that nurses it's young
